Our Company

Chain guide

Drive line products

Product range

### Our Company:

6 iwis antriebssysteme

### Product range:

- 14 **iwis**® Roller chains
- 20 **iwis**® Conveyor chains
- 32 **iwis**® MEGAlife chains
- 42 **iwis**® CR chains
- 46 **iwis**® Power and free conveyor chains
- 58 **iwis**® Special conveyor chains

### Drive line products:

- 70 **iwis**® Sprockets and plate wheels
- 74 **iwis**® Tools
- 86 **iwis**® Automatic Tensioners

### Chain guide:

- 100 Perfect lubrication
- 103 Efficient chain maintenance
- 104 Chain guidelines
- 106 Designing chain drives

# 98 years **iwis**

A company which has developed over 98 years has a story. The entrepreneurial family Winklhofer has been managing the fate of the company iwis since decades and has developed it into a group of companies which committed itself to tradition, precision and innovation. This group of companies produces high precision roller chains and systems for the automotive industry, the machine and plant manufacture, the packaging, printing and food industries, the agriculture and for industrial applications in the field of conveyor technology. More than 1000 employees at the production sites of Munich, Landsberg am Lech, Wilnsdorf, Sontra and Strakonice (CZ) have committed themselves to a quality standard on the highest level.

Our consequent customer orientation in all areas lead to a close cooperation with our customers and suppliers as well as to joint technical developments – as our goal is to always offer our customers a solution at the highest quality and sustainability level. Research and development play a major role in our company's philosophy: The detection of new trends and the development of new materials and production technologies require an innovative power and motivation of which we are proud of and which explain our top position in the market. Thus iwis antriebsysteme GmbH & Co. KG is a worldwide driving force in the general machine manufacture and delivers precision chain systems which move all around the world.

# A brand which stands for highest precision.

Technical perfection of highest quality for a maximum customer benefit – that is our high standard. 100% exact replication of more than 30 million spare parts every single day – a quality benchmark which a single expression stands for at iwis: Highest precision. We are proud of that fact and numerous certifications and awards in the quality sector shows us that we follow the right path!

# Precision for your success

## Technical perfection

- Use of high quality quenched, tempered and case-hardened steels
- High precision fabrication via SPC (statistical process control)
- Quality assurance complying with ISO 9001
- Optimisation of quality features via special heat treatment
- Constant monitoring of the chains for dimensional accuracy and articulation
- Surface coatings
- Special lubricants
- Special materials (e.g corrosion-proof)

## Highest possible quality

- Above average length of life
- Excellent wear resistance
- Restricted length tolerances down to 1/6 of the DIN tolerance
- Significantly higher fracture-resistance than the norm
- High fatigue strength
- All iwis chains are pretensioned
- Extremely efficient initial lubrication

## Benefits to the user

- Longer maintenance intervals
- Maintenance-friendly, easy and quick to dismantle
- Fewer down times
- Benefits of parallel and synchronous running
- Extremely precise positioning
- Extremely quiet running
- Safety reserves at load peaks
- Reduced stretching during running-in

## Application fields

- Printing presses
- Paper manufacturing and processing machines
- Copiers
- Ceramics and glass industry
- Packaging machines
- Medical technology
- Textile machines
- Machine tools
- Machines for processing plastics
- General engineering and systems construction
- Woodworking machinery
- Agricultural machinery
- Office equipment
- Building materials industry
- Construction machinery
- Conveyor technology
- Chemical engineering and process technology
- Tube and can industry

# Your perfect engineering partner

## A scientific based company

iwis has the largest chain Research and Development department in Europe, having more than 60 development engineers solely engaged for the engineering of chain drive systems. Besides basic development and designing innovative customer solutions, the main focus of iwis Research and Development division ranges from calculations, design and testing to wear elongation and fatigue strength analysis.

- Special knowledge of noise emission analysis and vibration engineering
- Our laboratory has the capabilities to carry out many different testing possibilities including microscopy, metallography, evaluation of mechanical properties, chemical composition and qualified analysis of data
- Dynamic simulation/analysis of chain drive systems with regard to chain load, torsional vibrations and friction losses
- FEM analysis of individual chain drive parts – static and dynamic stress and strength investigations
- Evaluation of iwis and customer readings at test facilities for verification of simulation models
- Identification of thermal characteristics of chain drives while testing in the climate-testing laboratory.

Evaluation of chain breaking strength and elongation up to 1000kN

More than 15 pulser are available for testing dynamic fatigue strength according to different testing methods

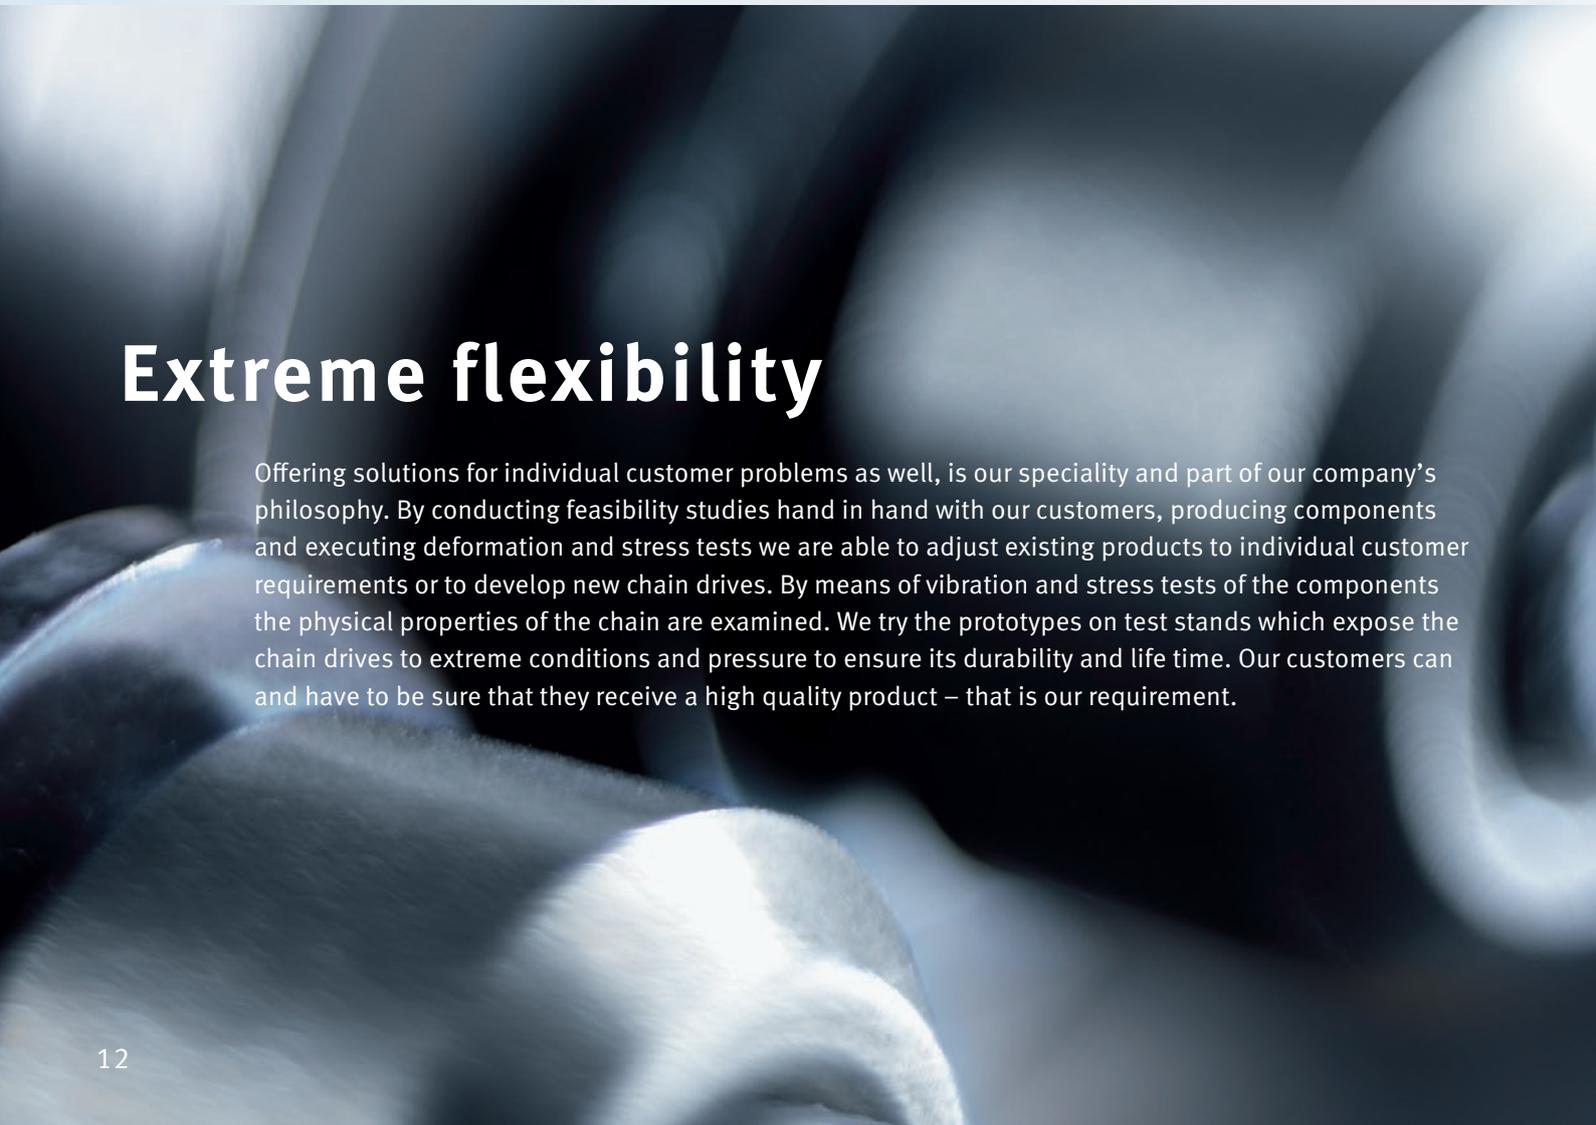

Testing of chain wear elongation behaviour on more than 20 test rigs

Each customer problem is a challenge for us. Either you need a special conveyor chain or perhaps an own chain configuration, integrating chain wheels and guides in existing modules:

## Troubleshooting

As a system manufacturer our specialists offer you individual solutions, which go far beyond the chain focus on the entire application and answer your problem as a whole. Our research and development department stands for creativity and innovation, as well as for a cooperation hand in hand with our customers. Do not hesitate to contact us in case you have a special problem.

## Extreme flexibility

Offering solutions for individual customer problems as well, is our speciality and part of our company's philosophy. By conducting feasibility studies hand in hand with our customers, producing components and executing deformation and stress tests we are able to adjust existing products to individual customer requirements or to develop new chain drives. By means of vibration and stress tests of the components the physical properties of the chain are examined. We try the prototypes on test stands which expose the chain drives to extreme conditions and pressure to ensure its durability and life time. Our customers can and have to be sure that they receive a high quality product – that is our requirement.

# iwis – your strong partner

The iwis group goes global. By supporting own affiliated companies in Great Britain and Switzerland as well as sites in Brazil, China, France and the USA the iwis group operates internationally. iwis products are being sold by distribution partners in more than 30 countries on all continents.

## outside Germany as well

iwis has realised the chances of the globalisation at an early stage and has established a distribution structure by a targeted positioning which guarantees a worldwide supply. Thus we do not only open up new markets but our customers can appeal to a familiar and reliable local partner with regard to their business activities abroad.

You are important to us and therefore we are happy to support you in word and deed. Let our competent specialists of our technical service team and our committed external force advise you. We would like to do calculations and chain designs for you and give you advice as far as your choice of the right chain for your applications is concerned. You can reach our Customer Service Team at any time on weekdays from 8 am to 6 pm. And by the way: We are happy to service you during the operating time of the chain as a reliable partner in all matters that arise right around the iwis chain.

## Our service for our customers

# JWTS<sup>®</sup> Roller chains

are characterised by an above-average service life due to excellent wear resistance, high consistency, matchless precision and a considerably higher breaking strength and fatigue strength than required by DIN/ISO standard. All iwis chains are pre-stretched and are provided with a highly efficient initial lubrication.

iwis SL series chains (Super Longlife) have pins with an extremely hard surface. This special design shows outstanding characteristics: Highest wear resistance, a prolonged service life, high breaking and fatigue strength, low susceptibility to deficient operational lubrication, corrosion and frictional corrosion in the chain links.

Roller Chains, double-pitch type

<sup>1)</sup> Also available with straight side plates <sup>2)</sup> Varying dimensions for cranked links

It should be noted that if cranked links are fitted, the breaking strength of the chain may be reduced by approximately 20%.

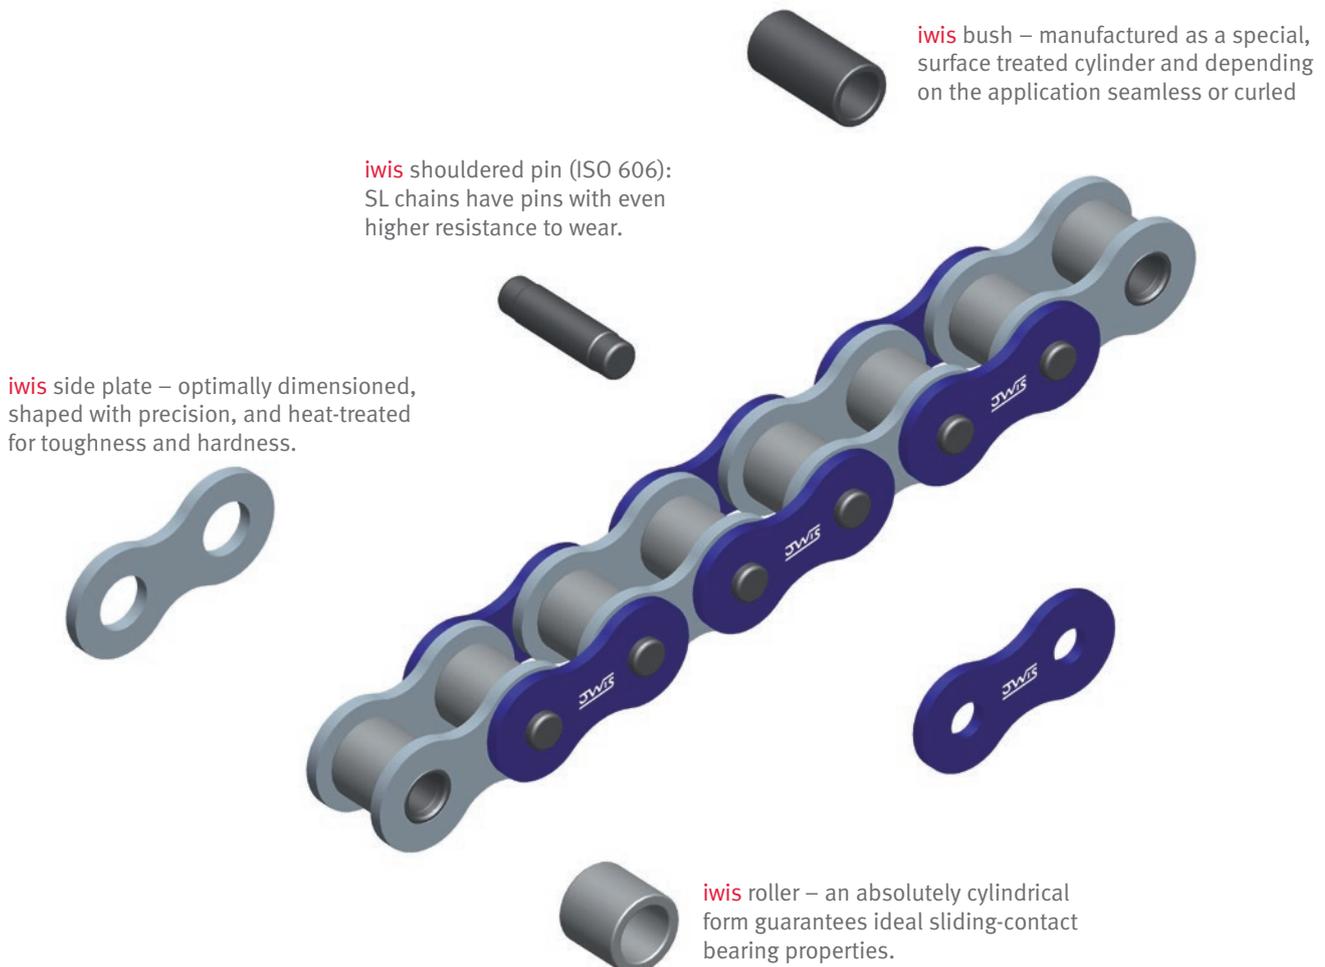

The suffix SL indicates chains with particularly wear-resistant pins.

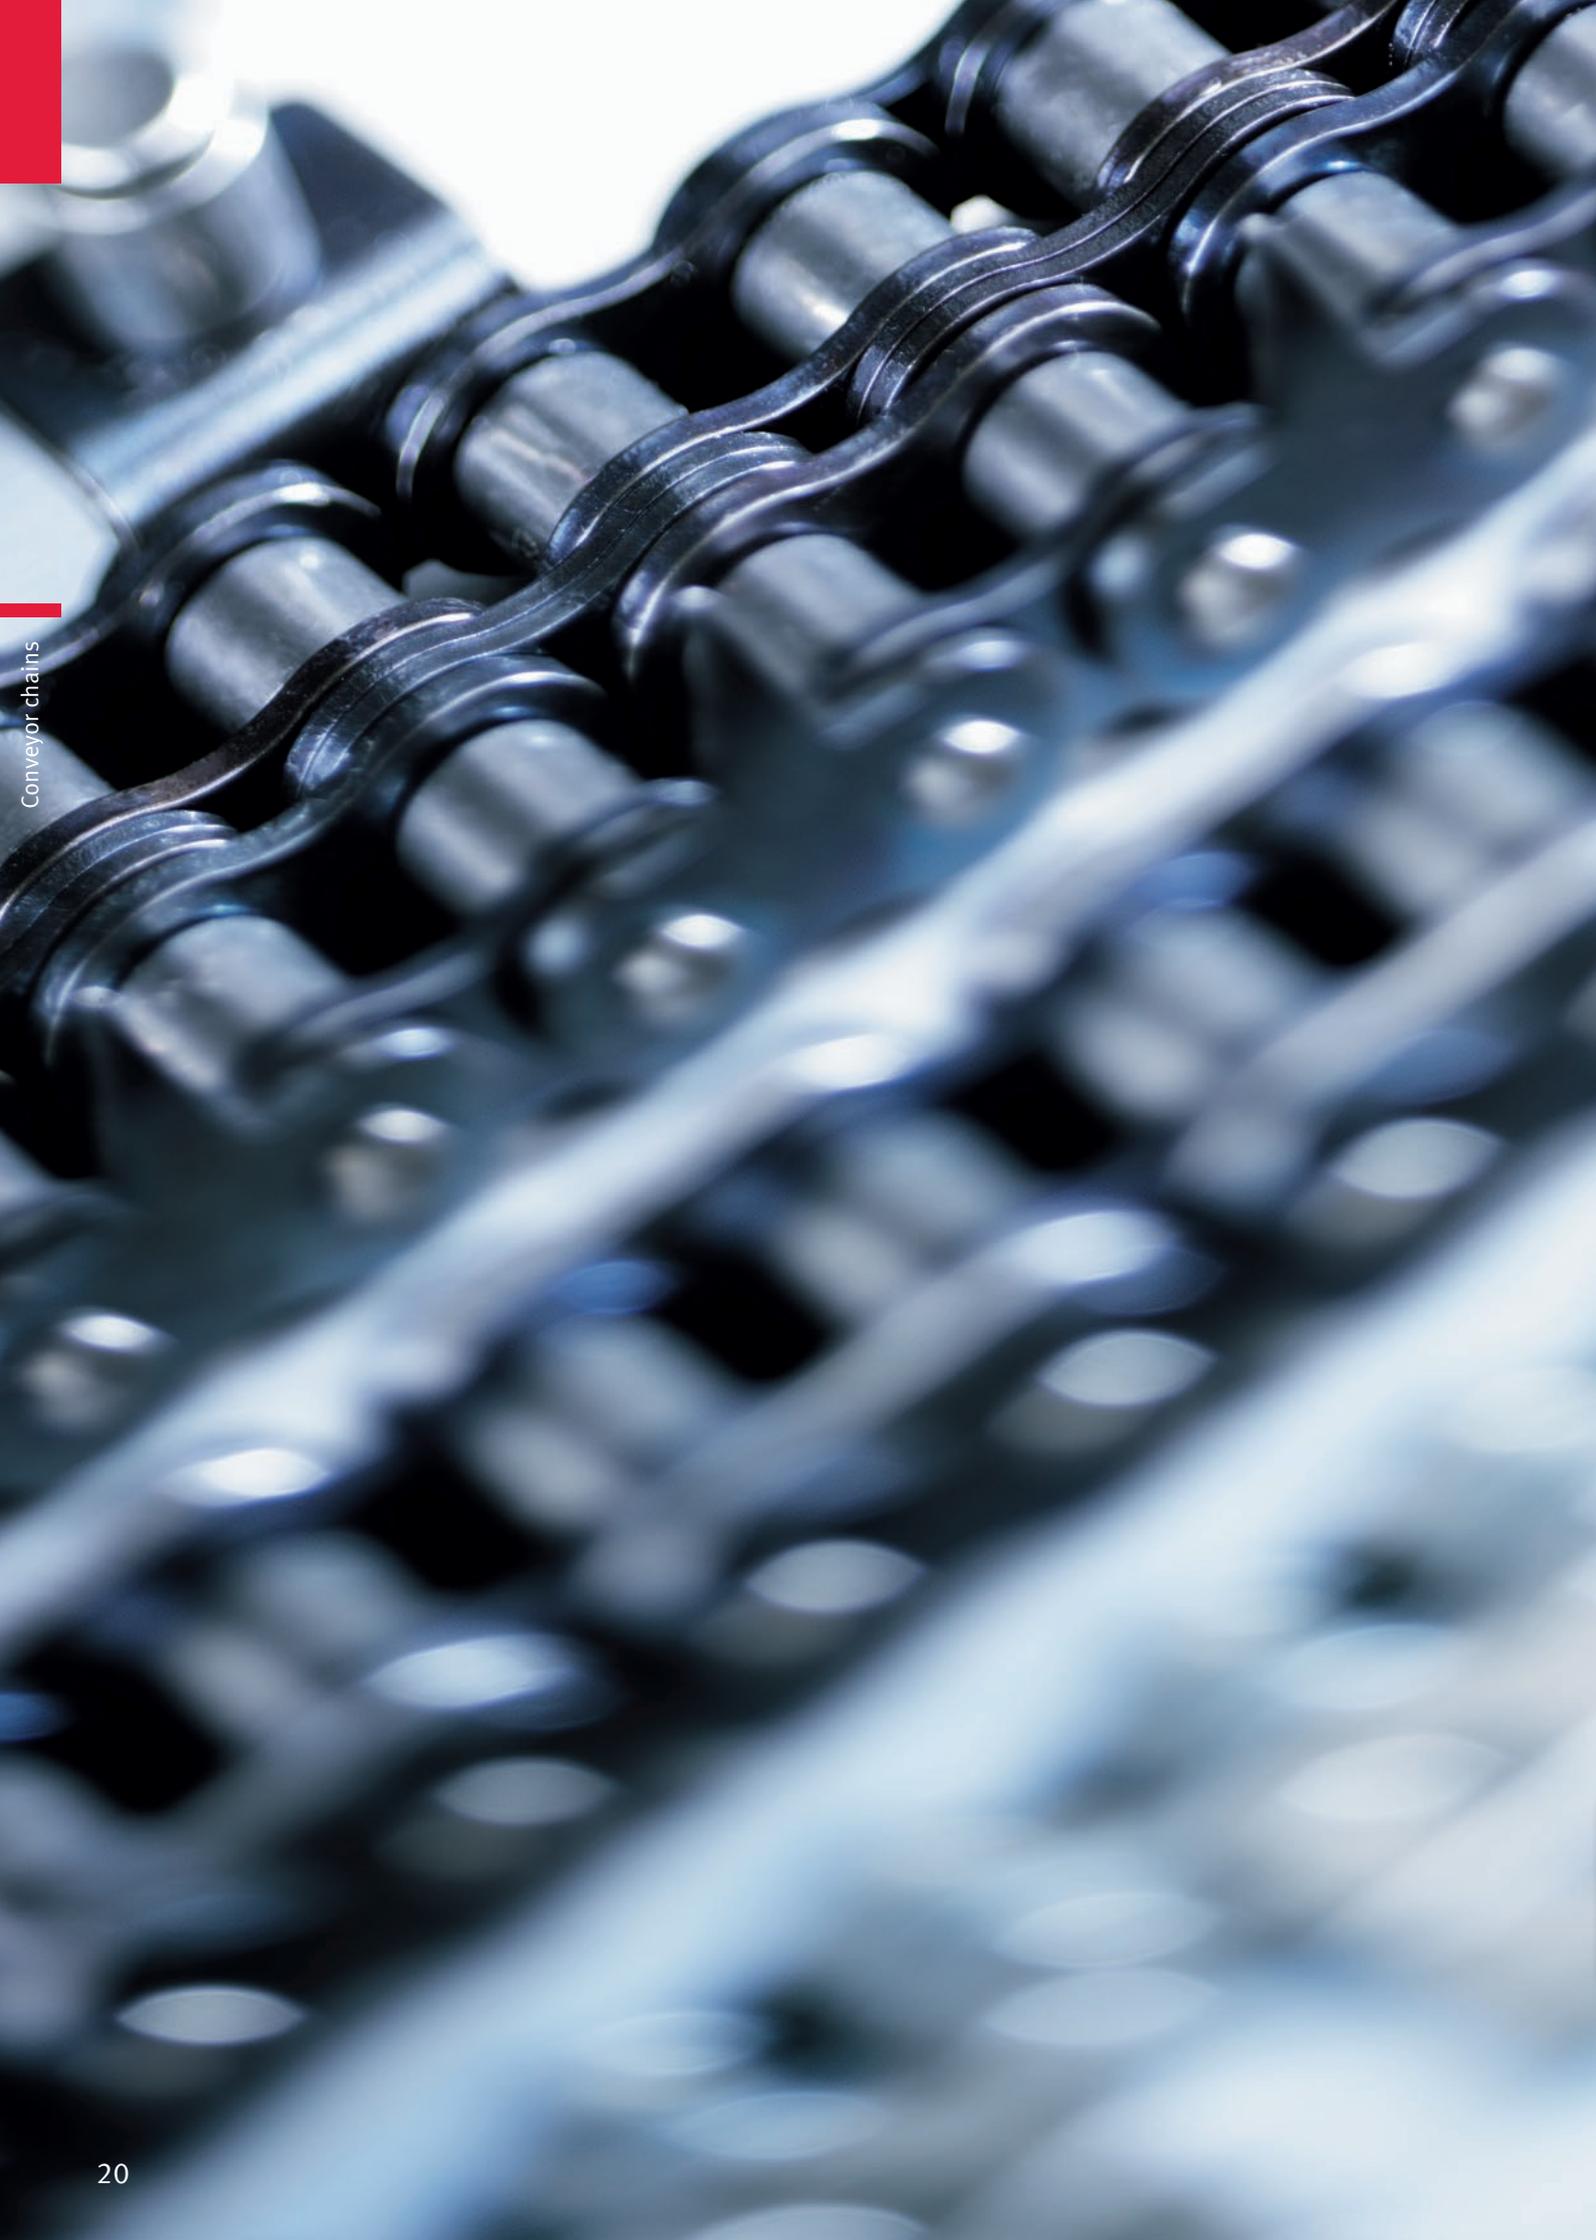

## **iwis**® High performance chains

Quality products with a world reputation

### HIGH QUALITY IS BASED ON EACH INDIVIDUAL PART BEING TECHNICALLY PERFECT

- Use of high-grade heat-treatable steels which are made exclusively for iwis to their material analysis, tolerance and surface quality.
- Each chain part is manufactured a million times daily to the same precision. This production is monitored by SPC (statistical process control).
- All chain parts are heat-treated, using special processes to optimize quality features.
- Constant geometry and high surface quality result from the use of modern production technologies.
- Chains are checked for dimensional accuracy: length tolerance, freedom of articulation and assembly component integrity, inspection of the press-in seating of the pin outer links and bush-inner link interfaces.
- The high standard of quality assurance conforms with the high requirements of ISO 9001.
- For special applications
  - Surface coatings
  - Special lubrications
  - Reduced length tolerated chains
  - Special materials (e.g. corrosion resistant)

# **JWIS**<sup>®</sup> Conveyor chains

iwis conveyor chains can especially be matched with the demands of customer applications. iwis does not only supply the customer with a wide range of special straight attachments and bent attachment plates, but the Technical Service Team offers solutions for individual customer demands and designs custom-made products.

iwis conveyor chains offer the user the benefits of parallel and synchronous running, extremely precise positioning, quiet running and a significantly higher breaking resistance than the norm. Also available: conveyor chains with extended bearing pins, conveyor chains with U-shaped attachments and multiple strand connecting links.

16 A-1 ANSI 80	M 1610 A	1	25,3	15,88	15,88	7,92	63,2	92,6	22,6	51,9

<sup>1)</sup> Please note the exact pitch measure „p“ for the assembly of special components.

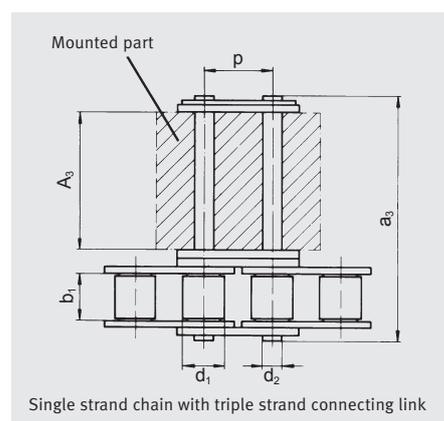

### EXAMPLES

Multiple strand connecting links permit components to be fitted easily at specific locations on the chain.

Multiple strand connecting links can be supplied with normal side plates or as connecting links with straight or bent attachment plates, mounted on one or both sides.

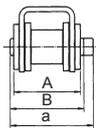

Note: The pitch of holes in the mounted part (component) differ from chain pitch.

## **iwis**® Conveyor chains with U-shaped attachments based on iwis chains complying with ISO 606

ISO no.	Ref. no. iwis	Pitch p (mm)	A (mm)	B (mm)	a (mm)	c (mm)	d <sup>1</sup> (mm)	g (mm)	h (mm)	i (mm)	k (mm)	l (mm)	s (mm)	M (mm)	Threaded insert m max. (mm)

<sup>1)</sup> Alternative diameters: for L 85 SL: 5,8 mm / for M 106 L: 4,7 mm

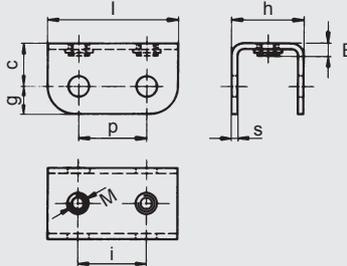

### Chain width:

When U-shaped attachments are fitted between the inner and outer plates, the chain width increases above the norm.  
 a = pin length of connecting link

Form 303.2 with standard attachment holes

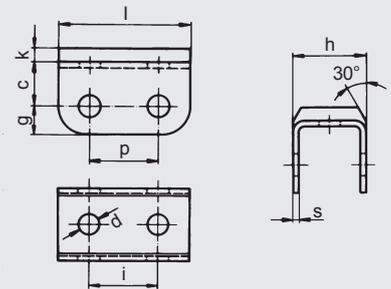

Form 303.32 with threaded inserts

With D 85 SL threaded inserts are positioned transversely to the chain

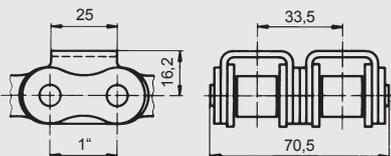

Form 303.9 with rubber cover

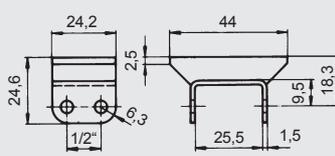

Cover material: Perbunan  
 Hardness: 65 Shore / Temperature: -30 up to +100 °C

## SPECIAL DESIGNS

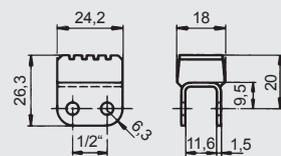

1"-double strand chain with special U-shaped attachment. Base chain: iwis M 1610 A

No. 303.94 for chain D 85 SL

No. 303.97 for chain L 85 SL

# JWTS<sup>®</sup> MEGAlife

MEGAlife maintenance free roller and conveyor chains can be applied in all areas where post installation lubrication is not at all or only partly possible. This is the case in clean and dry surroundings or in applications with difficult lubrication passage. MEGAlife maintenance free chains are corrosion resistant due to nickel-plated parts and can be utilized in a temperature range from  $-40^{\circ}\text{C}$  up to  $+160^{\circ}\text{C}$ . The chains are supplied either dry or with special-purpose lubrication in line with the requirements of the applied application.

## **iwis**® MEGAlife I and MEGAlife II

The maintenance free iwis chains

### PROBLEM/INITIAL SITUATION

- Lubrication is not at all or only partly possible
- Clean & dry surroundings are required
- Difficult/obstructed lubrication passage
- Contamination of manufacturing outlet and conveyor apparatus due to chain lubrication

### OUR SOLUTION

A high performance, maintenance-free chain with redesigned joints. Innovative technical details which result in an, as yet, unbeatable service life, even without re-lubrication.

### HIGHLIGHTS MEGALIFE I

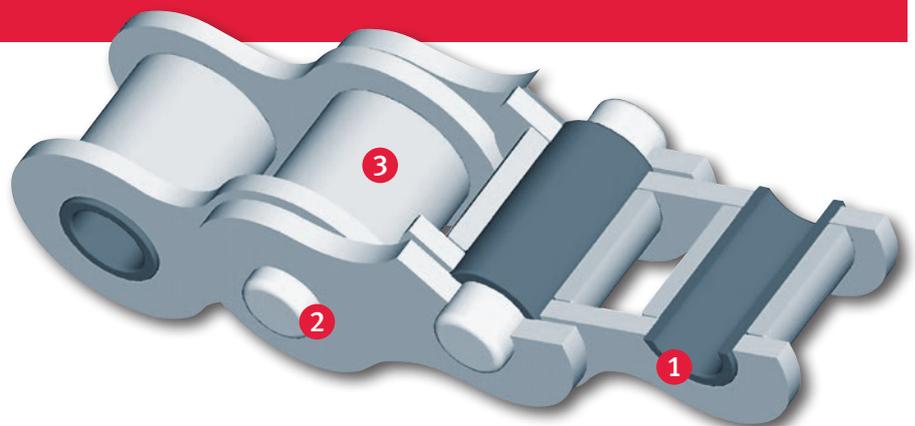

- Excellently qualified for normal chain applications without relubrication at speeds amounting to **max.** 3 m/s
- Permanently maintenance free under certain conditions
- Easy to dismantle due to easy break
- Applicable in corrosive environments; recommendable with lubrication, if possible
- 100 % compatibility with iwis standard conveyor chains due to the use of original iwis attachments
- MEGAlife conveyor chains with elongated pins are chemically nickel-plated
- All roller chains are mounted with shouldered pins
- Environmentally friendly because lubrication is not necessary
- Also available as transfer chain TF, power and free conveyor chain SF or grip chain

### HIGHLIGHTS MEGALIFE II

- The solution for **fast running** chain drives,  $v > 3$  m/s and/or high loads
- Considerably improved wear resistance due to a special thermo-chemical treatment of the pins which influences the hardness of the surface and optimizes herewith the adhesiveness
- Distinctive longer lifetime
- Pins and sintering bushes are optimally adjusted to each other
- Not recommendable in environments susceptible to corrosion
- Mainly applied as drive chain, as conveyor chain only in exceptional cases – at high speeds and loads
- For demanding applications

### HIGHLIGHTS

- 1 Seamless sintered bush made of a material specially developed for this application, hardened and treated to optimize its tribological properties
- 2 Pin with wear-resistant, friction-optimized coating
- 3 Seamless roller with corrosion-resistant coating and geometry optimized on the sinter bush

CUSTOMER BENEFITS	AREAS OF APPLICATION	PRODUCT RANGE
-------------------	----------------------	---------------

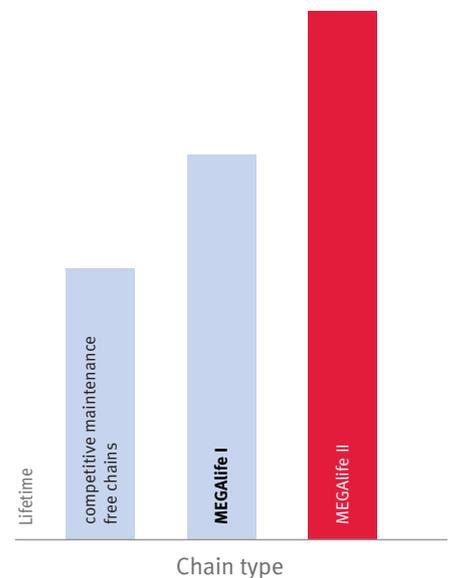

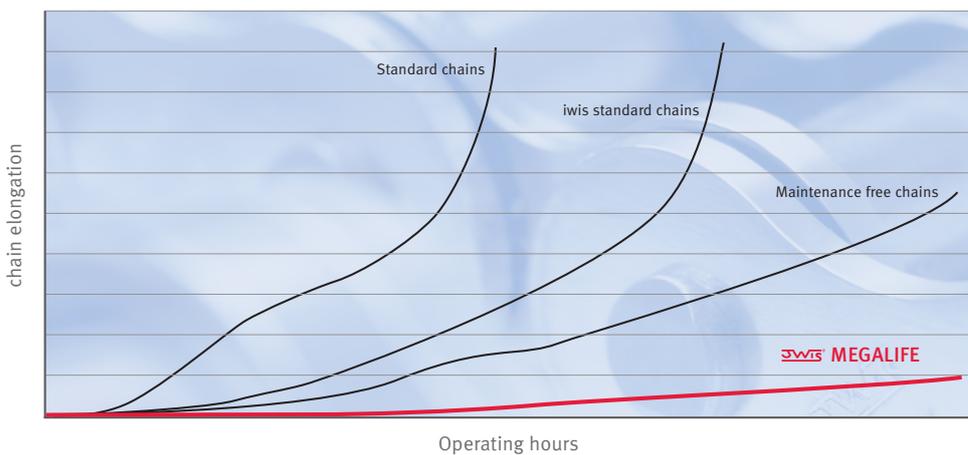

- Excellent wear resistance – even at high speeds and loads – where conventional maintenance free chains stretch
- Extremely high levels of fatigue and breaking strength
- Protected from corrosion due to nickel-plated parts
- Easy to dismantle, easy break
- Temperature range from -40°C up to +160°C
- Less production still-time and therefore reduced overall maintenance cost
- MGALIFE chains are clean, dry and environmentally-friendly due to absence of excess lubrication

- Packaging & Food Industry
  - Printing Industry
  - Material handling, Conveyor systems
  - Textile & Clothing Industry
  - Paper Manufacture & Book Binding Industry
  - Electronic Industry & Circuit Board Manufacture
  - Wood, Glass & Ceramic Industry
  - Medical technology
- ... and of course in all areas where relubrication is not at all or only partly possible.

- Roller chains according to ISO 606
- Roller chains with different attachments
- Roller chains with straight side plates
- Power and free conveyor chains
- Transfer chains
- Grip chains
- Special conveyor chains

MEGALIFE

Trial without relubrication at high speeds.  
 Graphic representation corresponds to iwis test results.

### EXTENDED PINS

The types illustrated are also available as connecting links and outer links for final assembly and repair (C only as outer link).

### SPECIAL MEGAlife VERSIONS

MEGAlife roller chains are also available in the following special versions:

For example:

- MEGAlife transfer chains with high resistant plastic support brackets or
- maintenance free power and free conveyor chains.

Contact us, our Sales Team will be pleased to advice you!

# JWTS<sup>®</sup> CR Chains

JWTS corrosion resistant chains consist of hardened, highly alloyed steels showing a good wear resistance and considerably higher fatigue and breaking strengths than for stainless chains. CR chains can be used in those applications where chains despite of extreme conditions need to remain flexible and stainless due to hygienic and visual reasons. A lubrication of CR chains is recommended.

## iwis® CR Chains

Corrosion resistant roller chains and conveyor chains according to ISO 606

### PROBLEM/INITIAL SITUATION

Chains in corrosive media have to possess high fatigue and wear resistance. Chains made of standard steels corrode quickly whilst stainless steels made of V2-A steel do not withstand these stresses. Nickel-plated or galvanised chains only offer limited corrosion-proofing because the coating is destroyed by abrasion.

### OUR SOLUTION

iwis high performance chains made of hardened high-alloyed steels with good corrosion resistance and significantly higher strength than stainless steel chains.

### HIGHLIGHTS

- High wear resistance if relubrication is done at regular intervals
- Good and long-lasting corrosion resistance – in comparison with surface-coated chains
- Significantly higher fatigue resistance and breaking strength figures than stainless steel chains  
→ smaller dimensions possible

### TECHNICAL FEATURES

	iwis CR	iwis Standard	Stainless Chain
All components	hardened	hardened	not hardened
pre-stretched	yes	yes	not regularly
Fatigue strength	80%	100%	50%
Wear resistance	95%	100%	30%

### AREAS OF APPLICATION

- Food product processing
  - Drinks manufacture
  - Packaging machines
  - Cheese and dairy technology
  - Areas where dominate moist or aggressive conditions
  - Cleaning systems
  - (Chemical) equipment construction
- ...and everywhere where chains have to remain articulated despite difficult conditions as a consequence of corrosion and may not rust on hygienic or visual grounds.

### CORROSION RESISTANCE

All CR-chains are provided with a reliable high quality initial lubrication.

For permanent corrosion resistance, a sufficient regular relubrication is necessary.

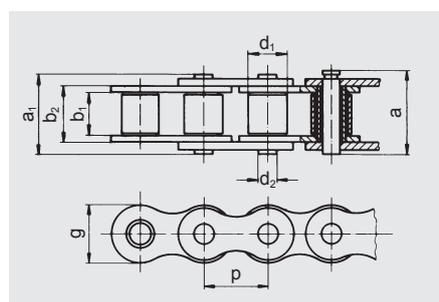

ISO no.	Ref. no. iwis	Pitch p (")	$a_1$ (mm)	Outside width a (mm)	$d_1$ (mm)	Diameter $d_2$ (mm)	Plate height	Breaking strength FB	Bearing area f (cm <sup>2</sup> )	Weight q (kg/m)
08 B-1	L 85 CR	1/2"	16,9	18,5	8,51	4,45	12,2	15.000	0,50	0,70
10 B-1	M 106 CR	5/8"	19,5	20,9	10,16	5,08	14,4	18.000	0,67	0,95
12 B-1	M 127 CR	3/4"	22,7	23,6	12,07	5,72	16,4	22.000	0,89	1,25

### RUST- AND ACID-RESISTANCE

- Dependent on
- duration
  - concentration
  - temperature
  - variations of the mixture of the individual media. We recommend field trials to check fitness for the operational purpose.

### CHAIN WHEELS

- Depending on the circumstances, chain wheels can be used which are made of
- stainless material
  - suitable plastics
  - or steel, possibly with an electro-plated coating.

## Influencing parameters

Technical outline: Which are the major factors causing corrosion?

### THE MAJOR PARAMETERS CAUSING CORROSION

There are four main factors causing corrosion:

- the medium in which the chain moves
- the material the chain is made from
- the construction of the component
- the run time and way of application

### CORROSION FACTORS

All CR-chains are provided with a reliable high quality initial lubrication.  
 For permanent corrosion resistance, a sufficient regular relubrication is necessary.

CONSTRUCTION	MATERIAL	MEDIUM	TIME INFLUENCE
<ul style="list-style-type: none"> <li>• Surface condition</li> <li>• Other materials in environment</li> <li>• Assembly (welding and riveting)</li> <li>• Mechanical stress</li> <li>• Design</li> <li>• Protective measures</li> <li>• Contact to medium (partial or total dipping)</li> </ul>	<ul style="list-style-type: none"> <li>• Steel product</li> <li>• Alloying additive</li> <li>• Metallurgic condition (heat treatment and mechanical treatment)</li> <li>• Pollution</li> <li>• Composition</li> </ul>	<ul style="list-style-type: none"> <li>• Motion of medium</li> <li>• Chemical condition</li> <li>• Viscosity</li> <li>• Pollution</li> <li>• PH-value (acidity)</li> <li>• Temperature</li> <li>• Pressure</li> <li>• Concentration</li> <li>• Solid deposit</li> </ul>	<ul style="list-style-type: none"> <li>• Maintenance frequency</li> <li>• Relubrication intervall</li> <li>• Relubrication medium</li> <li>• Aging of structure</li> <li>• Tension development</li> <li>• Change of inert layer</li> <li>• Temperature changes</li> </ul>

All corrosion factors influence the corrosion resistance to the same extent.  
**Please refer to our Technical Service Team for professional support.**

# Power and free conveyor chains

The new-generation iwis power and free conveyor chains L 88SF and M 120SF combine an optimized load distribution with a more gentle and even transport of the conveyed goods. The synthetic chain guides are capable of carrying up to a double of the weight because the offset roller arrangement on which the chains run reduces the load on the guides by 50 %.

iwis power and free conveyor chains allow easy positioning of the transported material at any point along the transport path and remove the need to start and stop the chain, thereby unsettling the conveyed material. The normal chain speed is 0.1 to 0.5 m/s.

By fitting a simple acceleration rail, the conveying speed can be doubled (at locations in which material is not accumulated) without changing the chain speed. This is often used to separate goods.

Thanks to a special wax lubricant, the chains are low-maintenance. Applied only to the actual links during the assembly of the chains, the conveying rollers – and therefore the conveyed material – remain clean and have no contact with the lubricant. A special-purpose initial lubrication can be used for special-purpose applications. Conveying rollers made from hardened steel or antistatic plastic are available.

Power and free conveyor chains

## **iwis**® Power and free conveyor chains

### PROBLEM/INITIAL SITUATION

- Simple and reliable transport of a very wide range of workpieces and workpiece carriers
- Continuous conveying, accumulating, singling out and acceleration

### OUR SOLUTION

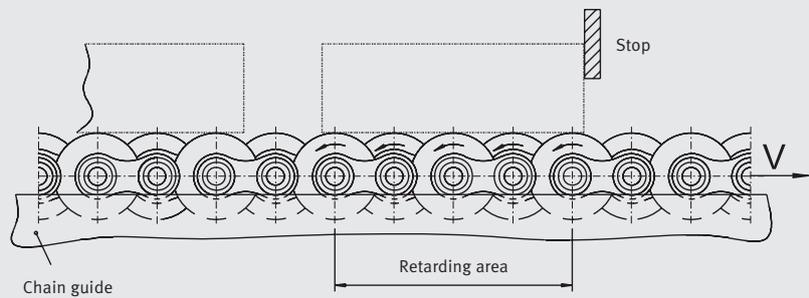

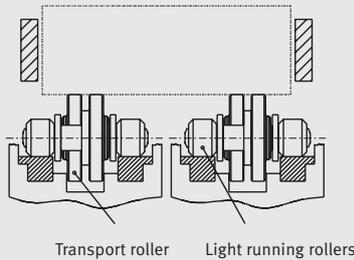

- High performance power and free chains in accordance to the high iwis standard in a very wide range of designs.
- L 88 SF and M 120 SF, the exclusive new iwis generation of power and free conveyor chains.

### ++ EXCLUSIVE ++

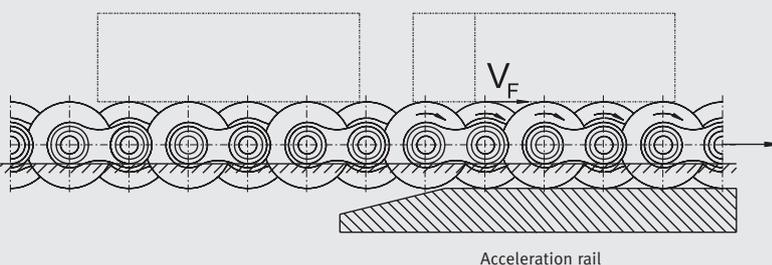

- All 1/2" and 3/4" power and free conveyor chains are equipped with **"light running rollers"**.

### HIGHLIGHTS

- Gentle transportation and optimum support for the material being conveyed
- In accumulating operation, roller friction only (see figure below)
- The newly developed **"light running rollers"** lead to a high reduction of drive power.
- Please refer to diagram friction force on page 52.

- Positioning the material transported with ease due to simple mounting points
- Chain no longer starts and stops jerkily
- Twice the transport speed is possible due to a simple acceleration rail (see figure below)
- Transport rollers made of either hardened steel or plastic (also antistatic)
- The outside of the chain is clean because only the articulated points are lubricated
- Low-maintenance due to special wax lubrication (standard)
- Other initial lubrication for special applications on request
- Fully compatible with existing guides, deflector units and chain wheels

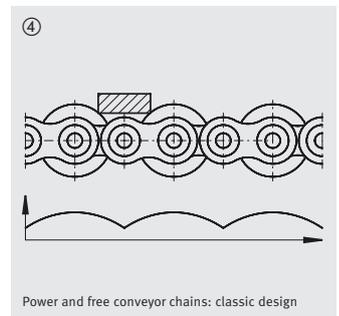

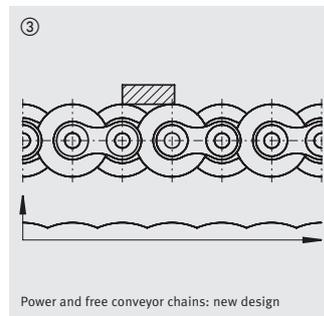

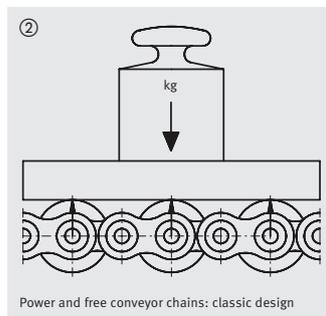

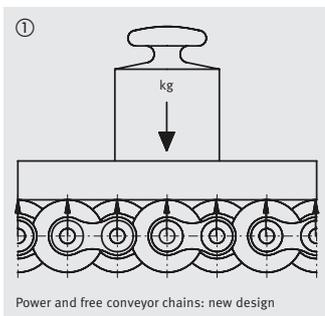

## **iwis**® Power and free conveyor chains

### Additional advantages

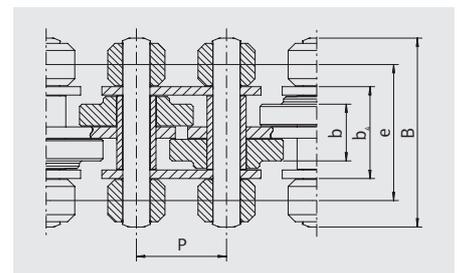

#### ADDITIONAL ADVANTAGES OF THE NEW POWER AND FREE CONVEYOR CHAINS L 88 SF AND M 120 SF

- Optimum load distribution – each pin bears load  
 → figure ① and ②
- Better support and smoother running of the conveyed material due to the transport rollers having an offset arrangement  
 → figures ③ and ④

## **iwis® MEGAlife SFK & SFS – maintenance free iwis power and free conveyor chains**

### PROBLEM/INITIAL SITUATION

- Lubrication is not at all or only partly possible
- Clean & dry surroundings required
- Difficult/obstructed lubrication passage
- Contamination of installation and material to be conveyed due to chain lubrication

### OUR SOLUTION

Maintenance power and free conveyor chain with special redesigned joint and transport rollers made of sintered metal – a technical innovation – **the first genuine maintenance free power and free conveyor chains with light running rollers.**

### HIGHLIGHTS

- Excellent wear resistance – also under extreme environmental conditions
- Easy to dismantle
- Reduced overall maintenance cost
- Less production stop and machine downtime
- Environmentally-friendly due to lubrication free chain surface
- Chains suitable for clean rooms

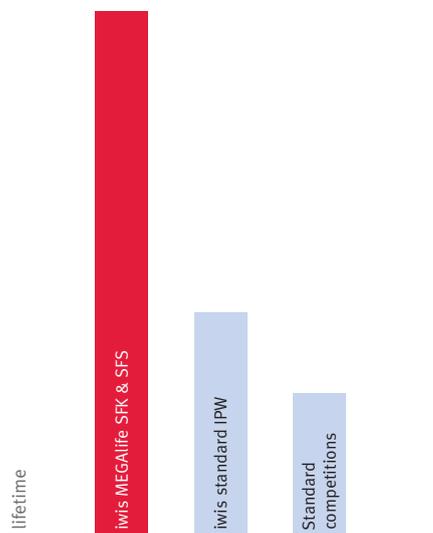

### TECHNICAL FEATURES

- Dry chain surface and transport rollers
- Corrosion resistant
- Transport rollers optional as plastic material or steel (stainless steel or nickel-plated)
- Temperature range for use –40 °C up to +160 °C (for transport rollers made of steel)
- iwis MEGAlife power and free conveyor chains are available in the new iwis or classic design in 1/2 inch and 3/4 inch pitch
- Transport rollers made of sintered metal reduce friction. This leads to reduction of driving power and strain on the chain

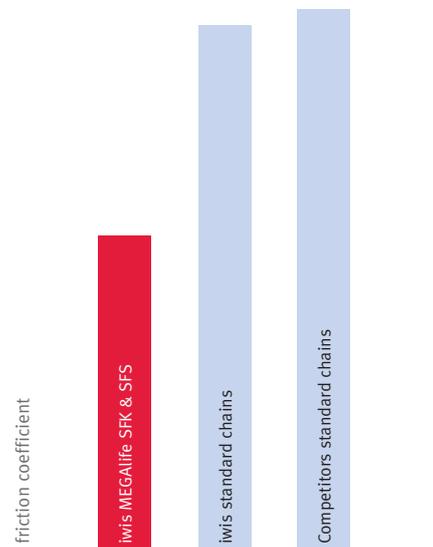

### AREAS OF APPLICATION

- Electronic Industry & Circuit Board Manufacture
- Packaging & Food Industry
- Conveyor-Equipment
- Wood, Glass & Ceramic Industry
- Medical Technology

... and of course in all areas where relubrication is not at all or only partly possible.

Comparison: lifetime operating time of power and free conveyor chains – without relubrication

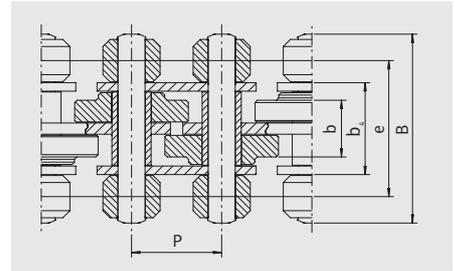

Comparison: coefficient of friction

### TOOL

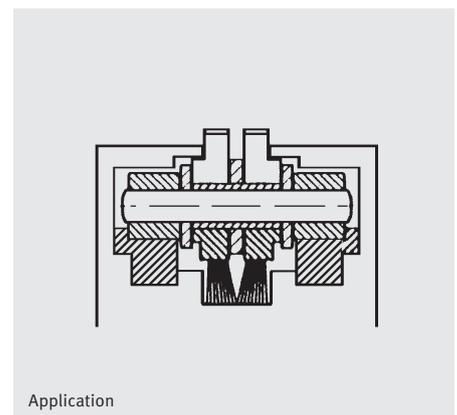

Tool for dismantling power and free conveyor chain M 120 SF and M 127 SF with 3/4 inch pitch

### CLEANING BRUSH FOR PROFILES

Profile cleaning brush

Multipurpose brush especially designed to clean conveying profile for most stringent conditions (for example: chips, welding drops, dust etc.). Brush only available for the new power and free conveyor chain generation of M 120 SF.

Application

## **iwis**® Power and free conveyor chains

### MAINTENANCE GUIDE FOR POWER AND FREE CONVEYOR CHAINS

As for every roller chain, the „bearing points“ of the power and free chain are also subject to natural wear. The correct tension, good guidance and effective relubrication are needed to reduce this and therefore increase the service life of the chain.

A power and free conveyor chain works perfectly at up to 2% extension caused by wear with the provision that it is constantly retensioned. Approximately 5% of the actual chain tensioning force occurring can be used as a guide value for pretensioning.

Power and free conveyor chains are given extremely effective initial lubrication in the works. The lubricant is used up in the course of time and effective and regular relubrication is necessary. During this process, care must be taken that the lubrication is undertaken at the correct points (= bearing points) and that the lubricant is able to creep.

### INFORMATION ON THE DESIGN OF POWER AND FREE CONVEYOR CHAINS

Important criteria when selecting a power and free chain are:

- Loading on the transport rollers from the weight of the material being conveyed on them. The load-bearing strength per roller is stated in the tables. If the contact surface for the material being conveyed is uneven, it is necessary to estimate how many free rollers are actually load-bearing.
- Loading on the chain from tensile forces occurring in operation. The most important influencing dimensions are the weight of the material conveyed and the friction factors. The following tensile forces occur in power and free chains:
  - from friction resistance between roller and chain pin
  - from friction resistance between transport rollers and chain bush when in accumulating operation
  - from roller resistance when rolling the runners on to the chain guides and when rolling the conveyed materials on to the transport rollers.

Rough determination of the chain tensioning force  $F$  per chain strand:

$$F = \frac{\mu \cdot 9,81 \cdot Q \cdot 1,4}{n} \text{ [N]}$$

$\mu$  = friction value 0.08-0.3 depending on:

- material pairing  
Steel/steel or plastic/steel
- Condition of the friction surfaces:  
dry or lubricated
- Degree of contamination of the friction surfaces

$Q$  = Total weight conveyed [kg]  
 $n$  = Number of chain strands

The formula is valid for even distribution of the weight loading over the chain strands. If the conveyed material is not in full contact because of unevenness, an estimate has to be made as to what percentage of the length in contact is actually effective. The tensile strength per chain strand is correspondingly higher.

### MAX. CONVEYOR LENGTH

Depending on loading 25–30 m, parallel and exact guidance must be ensured.

### AREA OF USE...

... of power and free conveyor chains:

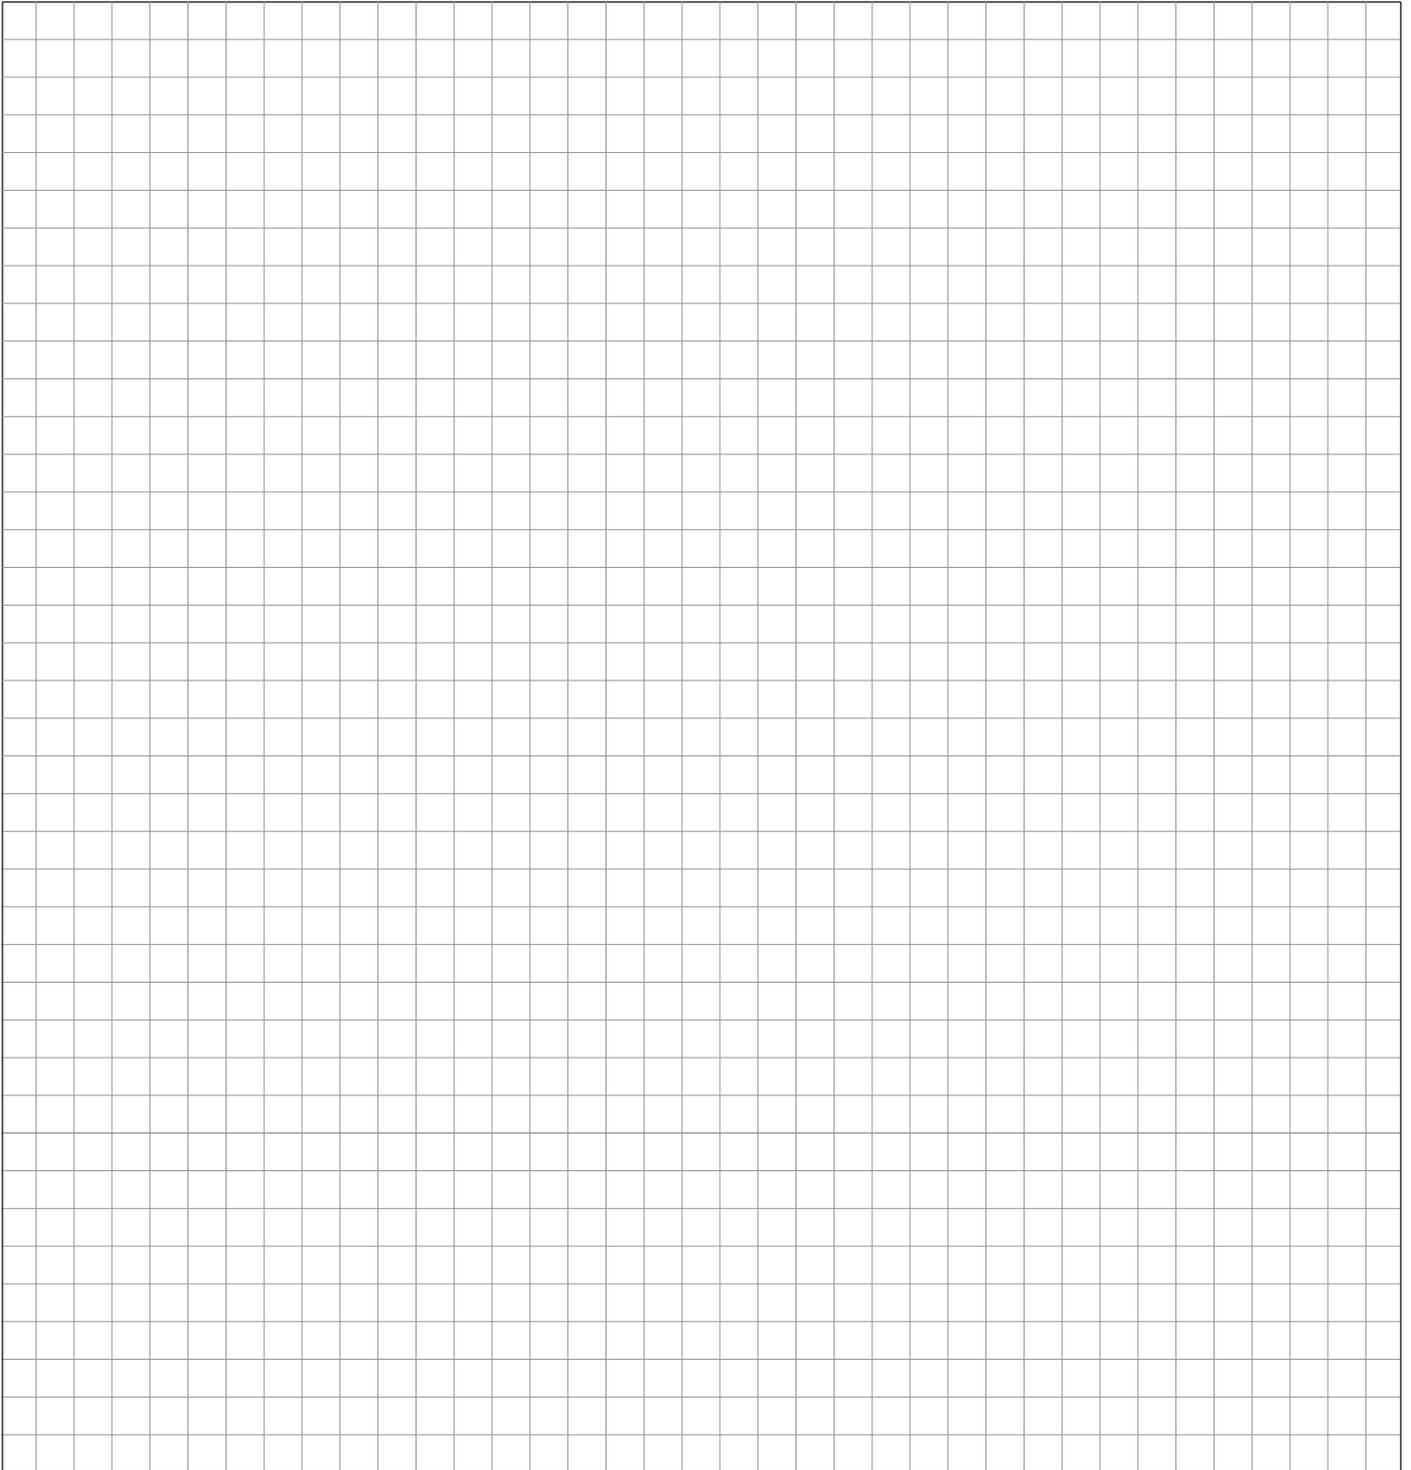

- In many areas of conveyor engineering
- Where there are links in processing and assembly lines
- In warehouse engineering
- In a wide range of material flow systems

... and everywhere where work-pieces, components for storage, pallets, containers, crates etc. have to be conveyed, accumulated, accelerated and singled out in a simple way.

### RECOMMENDED WORKING LOAD

iwis chain	Recommended max. working load [N]
L 88 SF	1500
L 85 SF	2300
M 120 SF	2500
M 127 SF	4000
M 1611 SF	5000
D 1611 SF	10000

## Notes

# **JWTS**® Special conveyor chains

iwis offers an extensive program of special chains for various industrial applications and requirements. While the plate chain is being used wherever smooth and reliable conveying through very narrow bends is necessary, the transfer chains are utilized wherever gentle transportation is required. iwis grip chains are applied wherever plate and sheet type materials are drawn in or off, transported or positioned. Additional iwis special conveyor chains: tube and can transport chains, pallet transporting chains, side bow chains, leaf chains anti back bend chains and hollow pin chains.

## iwis® Plate chains

### PROBLEM/INITIAL SITUATION

Secure and smooth transportation and storage of workpieces and workpiece carriers using very narrow curved track.

### OUR SOLUTION

iwis high performance roller chains according to ISO 606 with special plates pressed precisely in full contact (see images below).

### FLYER

For more information please see our specific product flyer available in our download area.

### HIGHLIGHTS

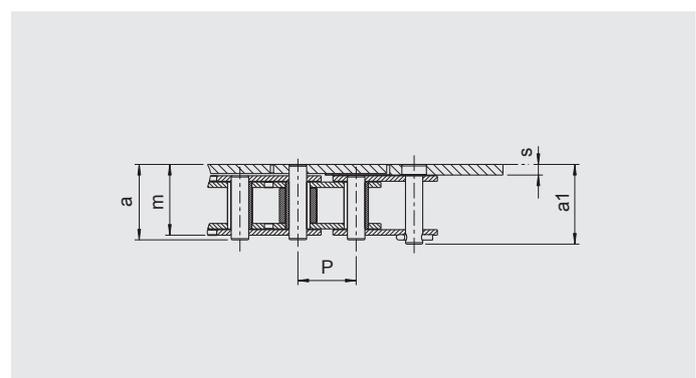

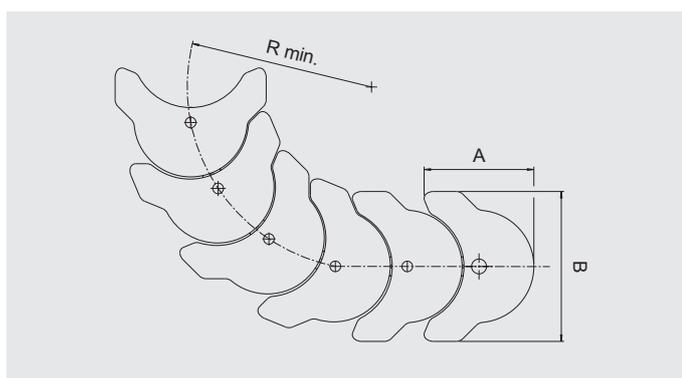

- CAD data of all chain types available
- Customized chain solutions on request
- Different plate material alternatives on request
- Plates pressed directly on to chain pins guarantee an absolutely flat transport track with no steps
- Optimum seal for the functioning areas of the chain

- Smooth contact area for workpieces due to engaging form of plates
- Extremely narrow radii of curvature are possible via specially designed plate shape
- Long conveying distances in most close-quartered space possible
- No risk of injury
- Use of ISO sprockets

### AREAS OF APPLICATION

- Tool transport systems
- Underfloor chain applications
- Conveyor technology
- General engineering
- Packaging and food industry
- Medical technology and pharmaceutical industry
- Linking machines and automation
- Storage and buffer systems
- ... and everywhere where smooth and reliable conveying through very narrow bends is necessary.

## **iwis® Transfer chains according to ISO 606**

Conveying, transporting, stop-start conveying of single parts, pallets...

### PROBLEM/INITIAL SITUATION

Open transport chains:

- Prone to interference from foreign bodies and small parts
- Often cause operational breakdowns
- Increased risk of injury
- Damage to material being conveyed
- Adherence of dirt and dust

### OUR SOLUTION

Fully enclosed transfer chains (= TF) with wear-resistant, rugged snap-on plastic attachments prevent malfunctions caused by foreign bodies etc.

**Exclusively from iwis.**

### FLYER

For more information please see our specific product flyer available in our download area.

### HIGHLIGHTS

- Functional areas of the chain are completely sealed, basic chain protected from penetration by foreign bodies
- Gentle transportation of sensitive materials
- Precisely fitting cover prevents the risk of injury and operational breakdowns
- Chain is completely clean on the outside, therefore no dust is bonded to it
- Initial lubrication with extremely high adhesion to the base chain, as standard

### ATTACHMENT CHARACTERISTICS

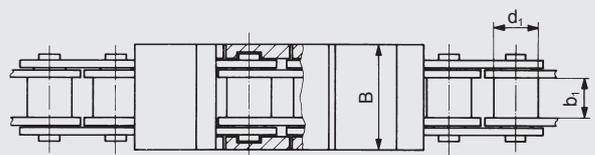

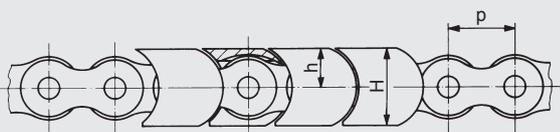

- Standard applications: Temperature range up to +100°C, standard optimised wear resistance
- High-temperature applications: Temperature range up to +140°C
- Applications requiring enhanced wear resistance
- Antistatic applications

Information on chemical resistance, hygroscopic properties or other possible attachment versions (e.g. flame-retardant material) available on request.

### AREA OF APPLICATION

- Mechanical engineering
- Conveyor and warehouse technology
- Packaging and food industry
- Electronic components and PCB production
- Electrical goods and household appliances
- Medical devices and pharmaceuticals
- Wood, glass and pottery processing
- Chemicals and process engineering
- Printing and paper industry
- ... and all other applications that call for gentle handling.

## **iwis**® Transfer chains according to ISO 606

Conveying, transporting, stop-start conveying of single parts, pallets...

### CHAIN WHEELS

- For TF-chains standard sprockets according to ISO 606 can be used
- By using chain wheels with number of teeth  $z > 18$ , the chain is completely protected in the deflection zone.

### SPECIAL DESIGN OF BASIC CHAIN

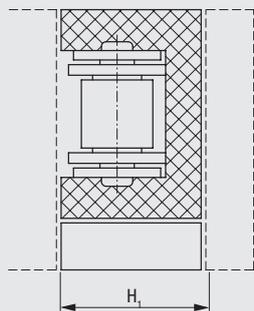

- Nickel-plated chains
- MEGAlife maintenance free chains
- CR-corrosion resistant chains only L 85 TF + M 106 TF

### CONNECTING LINK

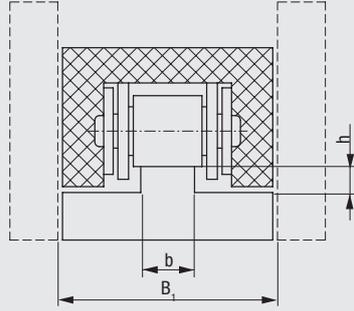

The ends of the chain are connected with a pin block ① which has a separate plug-in plate ② pushed on to it. The two supporting brackets ③ can be clipped on over the chain rivets by pushing down the chain in the right way. No locking spring is required. The relevant 2 supporting brackets are black in colour to make it easy to find the connecting link.

### VERSIONS INSTALLED

## **iwis® Grip chains according to ISO 606**

Gripping, retracting, transporting soft foils

### PROBLEM/INITIAL SITUATION

Reliable feeding, transporting and positioning of thin-walled materials with a large area.

### OUR SOLUTION

iwis high performance grip chains with wear- and corrosion-resistant clamping elements. **Exclusively from iwis. Patented for iwis.**

### FLYER

For more information please see our specific product flyer available in our download area.

### HIGHLIGHTS

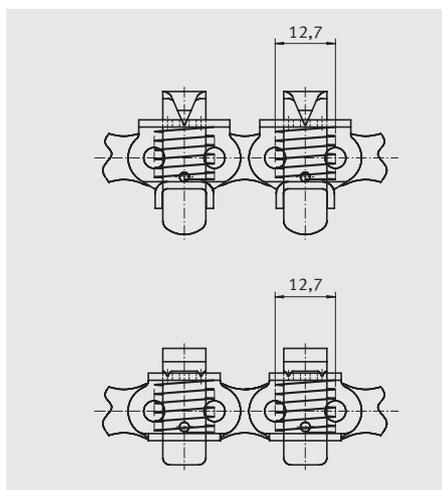

- iwis high performance chain with excellent wear resistance
- Marginal initial elongation due to optimal pre-stretching
- High rigidity enables applications also in long machines
- Basic chain chemical nickel-plated
- Flawless operating parallel as well as synchronously running chains due to practically identical chain lengths
- All chains are provided with reliable, high quality initial lubrication, approved for use in the food industry
- Differing levels of spring force allow an extremely wide range of materials to be gripped gently
- Complete chain solution – ready-to-install

### TECHNICAL FEATURES

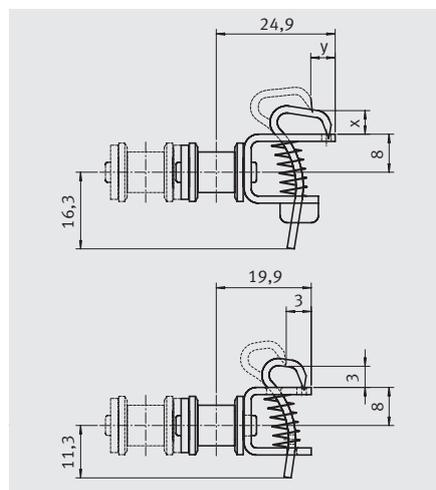

- Single or double chain 1/2 x 5/16 or 5/8 x 3/8 inch according to ISO 606
- Gripper with 1 or 2 tips designed as flat clamps or button grip elements, special designs on request
- Retaining force is dependent on material conveyed and spring design – differing number of coils and wire spring diameters obtainable
- The gripper opens by running against a control disc (e.g. chain wheel hub) which causes it to swivel out of the way to the outside
- Recommended max application speed is 2 m/s

### AREAS OF APPLICATION

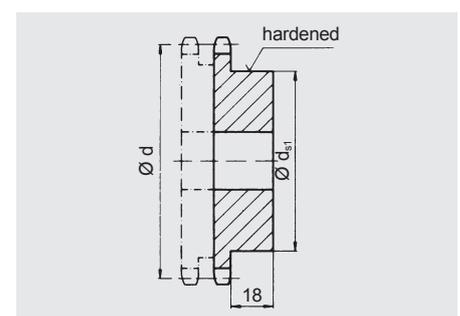

- Packaging industry, especially foil packaging
  - Electronic industry and manufacture of printed circuit boards
  - Feeding in thin-walled sheet, plastics and other hard materials
- ... and everywhere where plate and sheet type materials are drawn in or off, transported or positioned, e.g. for punching, welding, filling, coating, cutting, stretching, shaping, sealing etc.

Dimensions x and y dependent on the spring used, on request

Ref. no. iwis	Pitch P (mm)	Weight q (Kg/m)
Simple chain L 85 Grip	12,7	1,15
Double chain D 85 Grip	12,7	1,80

## **iwis**® Grip chains according to ISO 606

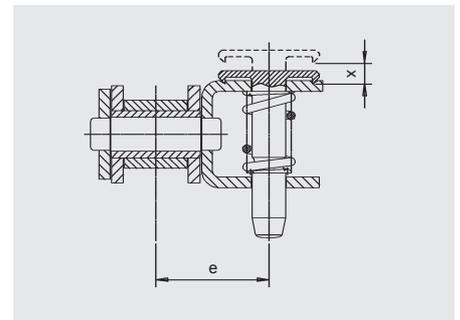

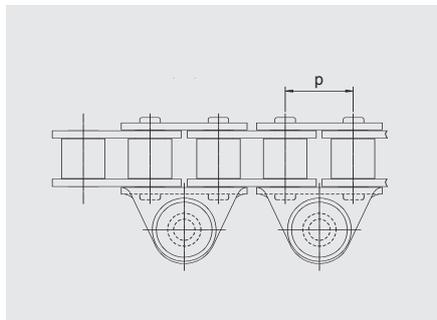

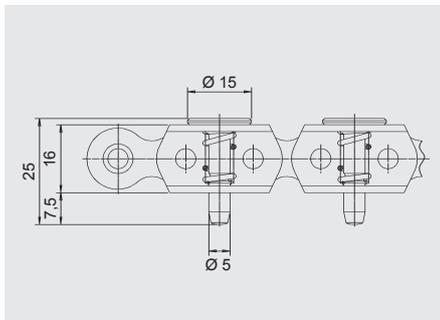

Gripping, retracting, transporting soft foils

### V. D FOR FILM TRANSPORT CHAINS

- Special design with button grip elements
- Gripper as a flyt head

Ref. no. iwis	Pitch	Order No.
Simplex chain L 85	12,70	50035491
Simplex chain M 106	15,875	50034301

Dimension x depends on the spring used, on request

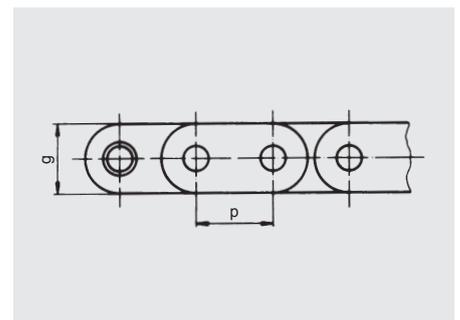

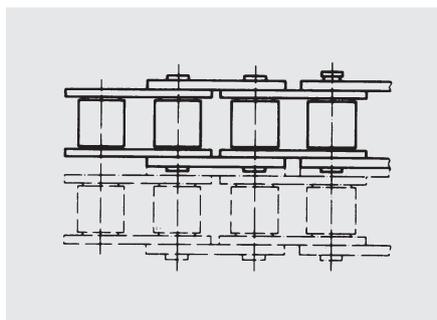

## **iwis**® Pallet transporting chains

### HIGHLIGHTS

- Material to be transported can be positioned throughout because of the straight side plates
- Roller chains with straight side plates for transporting a wide range of material

Ref. no. iwis	Pitch p (mm)	g (mm)	Breaking strength $F_b$ iwis mean (N)	Weight q (kg/m)
Single strand chain M 128 AG	19,05	18,0	42.000	1,75
Double strand chain D 128 AG	19,05	18,0	84.000	3,50

Dimensions and figures not stated correspond to those for iwis chains M 128 A SL or D 128 A to DIN 8188.

## **iwis**® Side bow chains

Transporting, conveying, pulling on curved shape tracks

### PROBLEM/INITIAL SITUATION

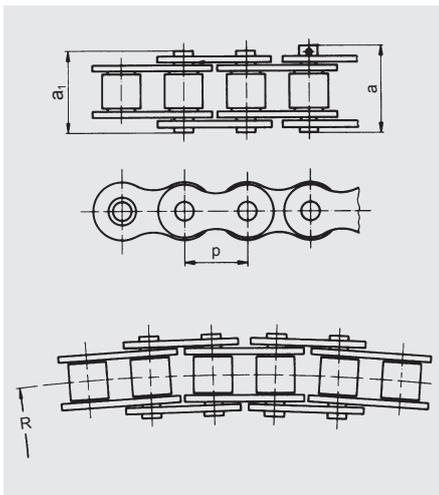

- Transporting and conveying on curved shape tracks
- Chains twisting when the shafts are at an angle to each other
- Change in the position of the material being transported e.g. from the horizontal to the vertical

### OUR SOLUTION

iwis high performance chains with specially designed chain link.  
**Exclusively from iwis.**

### HIGHLIGHTS

- Instead of being in contact with the line, the chain link is in overall contact throughout the curved area.
- Very narrow radii of curvature are possible because of symmetrical, tapered pins
- By using iwis straight and bent side plates suitable for universal use as conveyor chains

Ref. no. iwis	Pitch p (mm)	a <sub>1</sub> (mm)	Outer width a (mm)	Minimum radius R (mm)	Breaking strength iwis F <sub>B</sub> (N)	Continuous (N)	Transient (N)	Weight (kg/m)	Connecting links available

Dimensions not stated correspond to those for iwis chains to DIN 8188, American standard.

## **iwis**® Anti-backbend chains

Chain which is only flexible on one side for pushing lightweight loads and bridging short gaps without guides

### PROBLEM/INITIAL SITUATION

- Intake or respectively transmission of compressive forces in and perpendicular to the traversing direction
- Redirection of compressive forces of any angle
- Space restriction

### OUR SOLUTION

iwis Anti-backbend chains transmit tensile and compressive force with optimum material and metallurgical specifications to provide performance and value unparalleled in the market place.

### FLYER

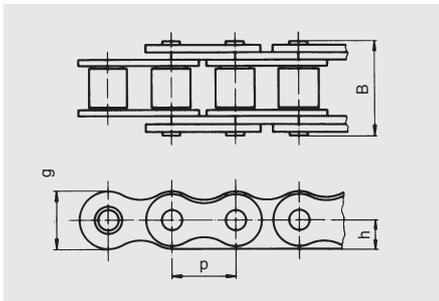

For more information please see our specific product flyer available in our download area.

### HIGHLIGHTS

- Anti-backbend chains are flexible in only one direction
- Anti-backbend chains are used for pushing loads and transmitting forces over longer distances without the need for a guidance system

### AREAS OF APPLICATION

- Numerous reference projects of developed chain versions according to specific customer needs
- Various material specifications available
- Different dimensions available
- Medical devices
- Transport systems
- Building services engineering
- Machine tools
- Ergonomic work stations & furniture

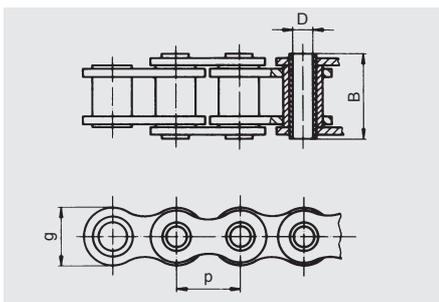

Ref. no. iwis	Pitch p (mm)	g (mm)	h (mm)	B (mm)	Weight (kg/m)

The principal dimensions correspond to iwis chain M 128 A SL to DIN 8188  
Smallest chain wheel: 10 teeth

## **iwis**® Hollow pin chain

Simple fixing of attachments and transverse struts

Ref. no. iwis	Pitch p (mm)	g (mm)	B (mm)	D (mm)	Breaking strength iwis (N)	Weight (kg/m)
M 128 HB	19,05	18,0	25,5	6	36.500 <sup>1)</sup>	1,23

Special bush chain in accordance with roller chain 3/4 x 1/2 inch to ISO 606  
Hollow pins can be arranged at any desired interval.

<sup>1)</sup> Breaking strength without pins inserted 34,500 N

## iwis® Tube transport chains

### PROBLEM/INITIAL SITUATION

Gentle support and reliable transportation for thin-walled hollow bodies through several processing stations (cleaning, painting, drying...).

### OUR SOLUTION

iwis high performance chains – roller chains with rust-resistant, easy to change attachments. **Exclusively from iwis.**

### FLYER

For more information please see our specific product flyer available in our download area.

### HIGHLIGHTS

- Change the transport bars in the system without difficulty using the special iwis tool
- Not necessary to dismantle the chain
- Adapter and bars made of highly alloyed, corrosion-resistant steels with good elastic characteristics
- Long life in comparison to hollow pin chains thanks to the use of the iwis standard roller chain
- Large standard of range of bar lengths
- Different shapes for bar ends - nipples made of aluminium or plastic are also available
- Freely selectable distance between the bars
- 3/4 inch chain also available in curved side design (M 128 ASB)

### TECHNICAL FEATURES

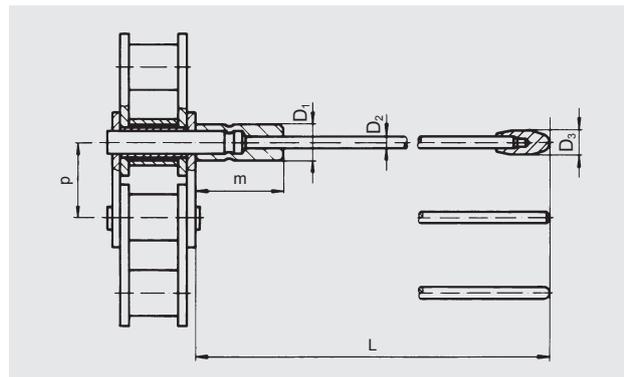

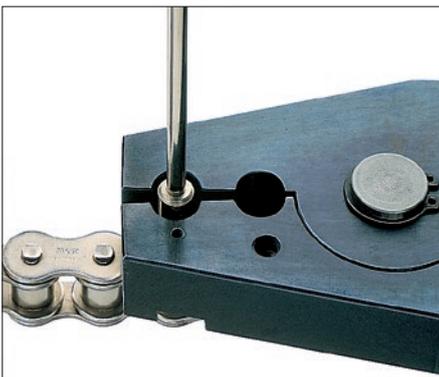

- The bars are pinched on to the extended pins of the base chain using an adapter and secured by fins to prevent twisting
- The bar can be changed quickly and easily if a repair is needed by breaching open the adapter with the iwis special tool (see illustration)

### AREAS OF APPLICATION

- Everywhere where tubes and other thin-walled hollow bodies (cans) are transported, cleaned, painted, dried...

ISO no.	Ref. no. iwis	Pitch p (mm)	L max. (mm)	D <sub>1</sub> (mm)	m (mm)	D <sub>2</sub> (mm)	D <sub>3</sub> (mm)

Please state the length L in any enquiry or order.

## iwis® Can transport chains/Pin oven chains

### PROBLEM/INITIAL SITUATION

Safer transport of thin-walled hollow bodies at high speeds and subject to the influences of differing temperatures and media.

### OUR SOLUTION

Extremely wear-resistant iwis high performance chains with specially adjusted bars and variable protective heads.

### FLYER

For more information please see our specific product flyer available in our download area.

### HIGHLIGHTS

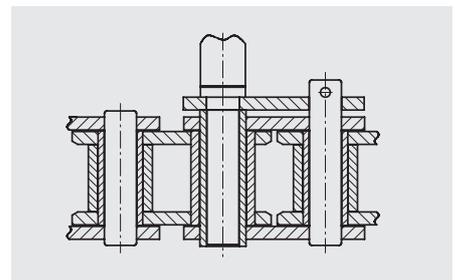

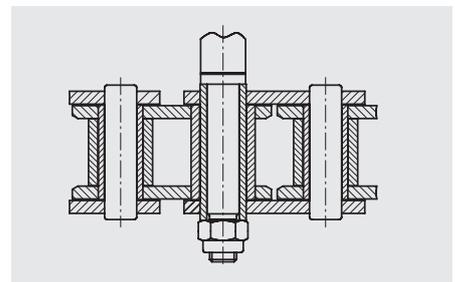

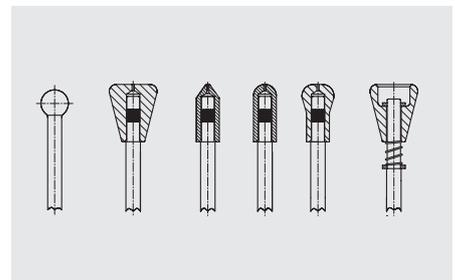

- Extremely long life and reliable roller chain with integrated hollow pins every seventh pitch
- Simple to change transport bars in the line
- Non-drip high temperature lubricant which evaporates without leaving a residue and is approved for use in the food industry
- Predefined fracturing points in the bars prevent damage within the line if there is a collision

### TECHNICAL FEATURES

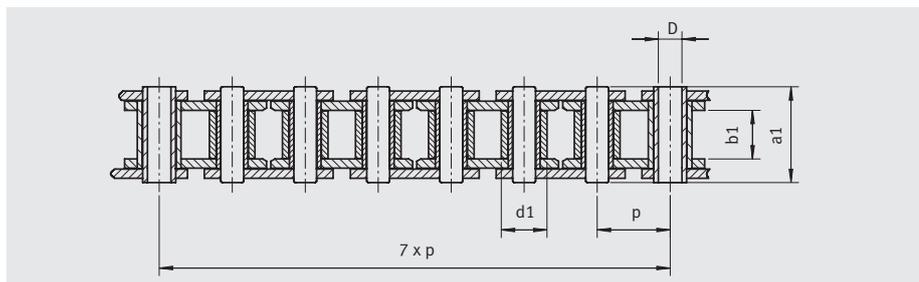

- The transport bars are inserted in the hollow pins at defined intervals using retaining nuts or split pins
- Precise alignment of the chain wheels and good guidance of the chains increases the length of service life
- The chain should be brushed clean before relubrication at the correct points

### AREAS OF APPLICATION

- Everywhere where cans or other thin-walled hollow bodies are transported, painted, dried ...

End link design B (from combination 4x4)

**iwis Leaf chains** are manufactured from precision iwis chain parts to ISO 606.

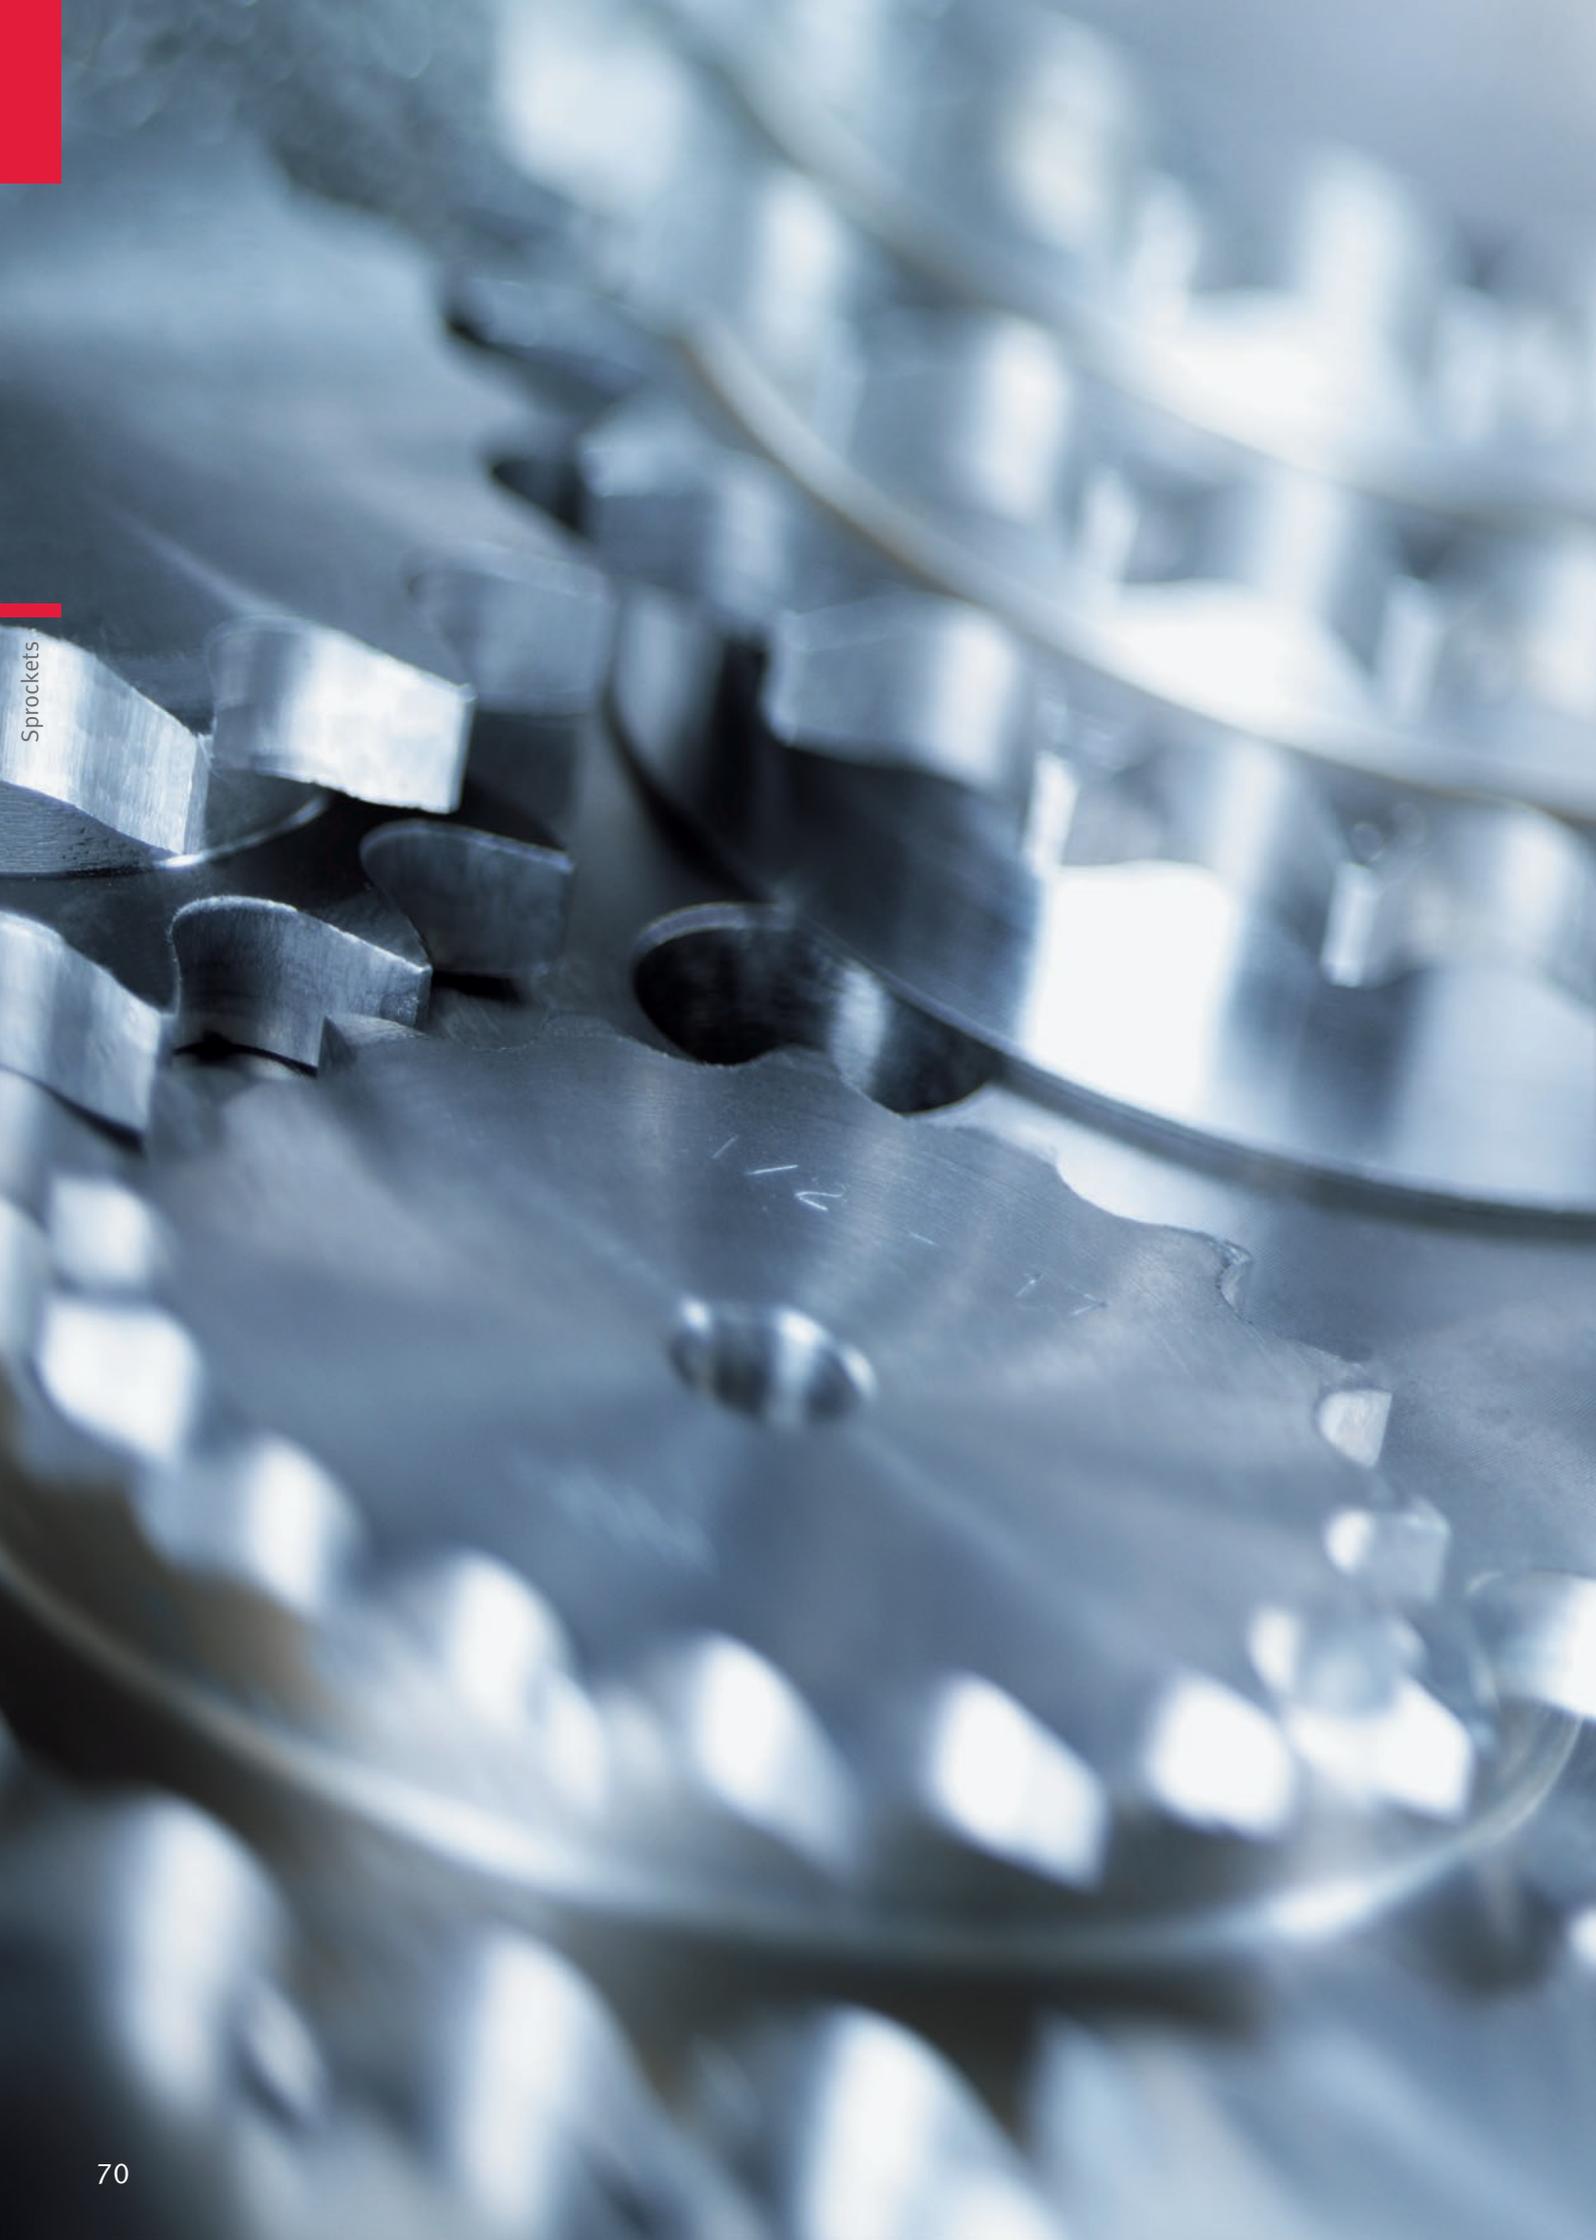

The chain selection will be determined by the size and frequency of shock loading and the appropriate national lifting regulations.

Example for the design of a deflection roller

Inner roller width:  
 $b = a_1 \cdot 1,15$   
 Minimum base diameter:  
 $d_{f \min} = p \cdot 5$

Where possible, fit large diameters.

# JWIS<sup>®</sup> Sprockets

The form of the Sprockets is determined by the following factors: type of chain, the number of teeth, the torque to be transmitted and the application. A distinction is drawn between sprockets and chain plate wheels for roller chains according to Norm (e.g. ISO 606) and special versions. Sprockets with hub allow the transmission of a higher torque, whereas plate wheels may be used only for the transmission of small torques. For a detailed instruction regarding design and construction of sprockets and plate wheels, please view of our iwis chain engineering hand book.

The iwis sprocket and plate wheel program will be supplied either directly from Munich or alternately from our sister company Flexon in Wilnsdorf.

For more detailed information about our complete sprocket program, please take note of the catalogue "Sprockets" of our sister company.

### FURTHER AVAILABLE PRODUCTS:

- Taper bush for sprockets
- Chain tensioning wheel complete with ball bearing - ready for installing
- Sprockets for taper bush
- Sliding hub range, series DA
- Sliding hub range, series FT
- Elite sliding clutches, series FT
- Shaft coupling by chain coupling

### ON REQUEST WE MANUFACTURE AND DELIVER:

- Special plate wheels according to customer drawings and specifications
- Complete mounted modules existing of chain sprockets, pulleys, bearings and shafts
- Not only prototypes, but also as series produced types in large quantities (project specific)

#### Attainable materials:

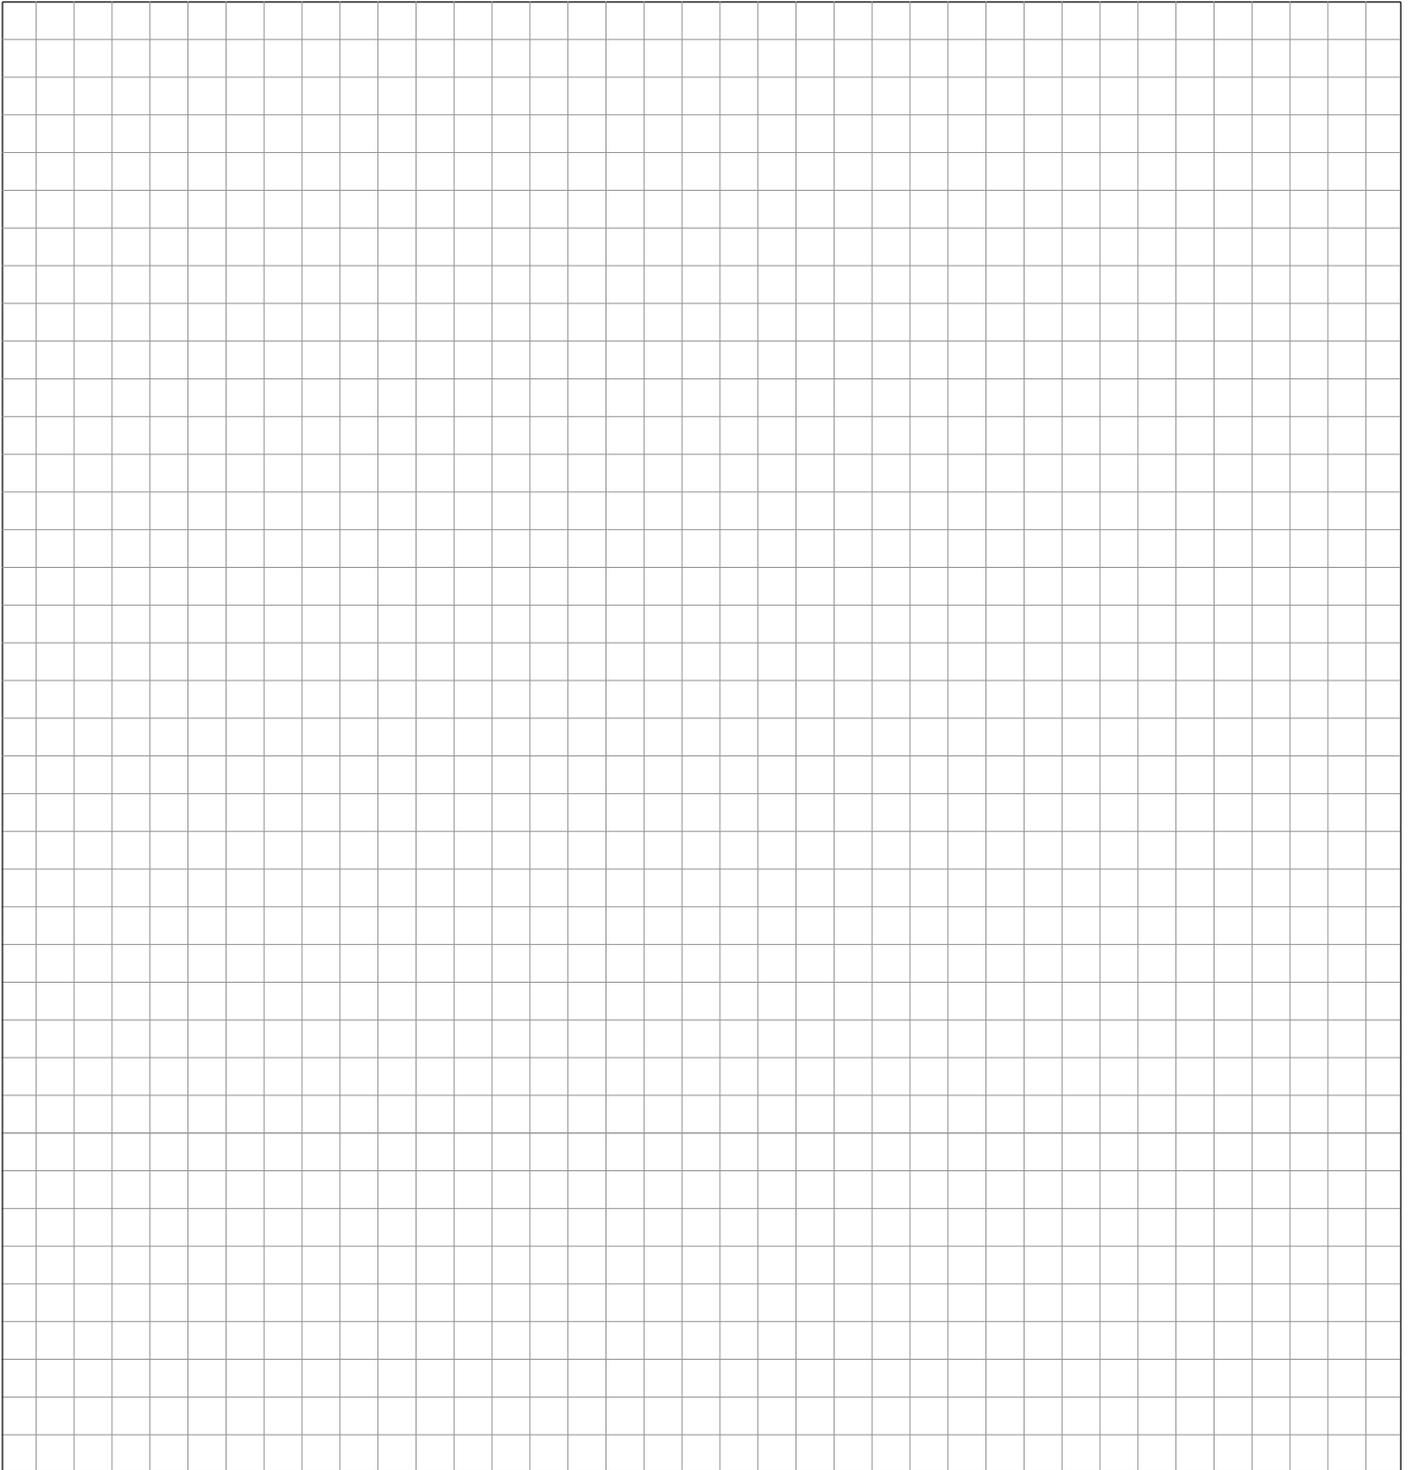

- Case hardened steels (hardened/not hardened)
- Tempering steels (hardened/not hardened)
- Stainless steels
- Plastic

#### Coating:

- All types possible

Please contact our qualified Technical Service Team for support in chain engineering and the design of chain drives. They will happily assist you.

## Notes

# JWTS<sup>®</sup> Tools

iwis tools facilitate the breaking and riveting of roller chains pursuant to ISO 606 and the iwis norm and are useful for workshop use. The iwis tool product range also includes repairing tools for tube and can conveyor chains, power and free conveyor chains and plate chains.

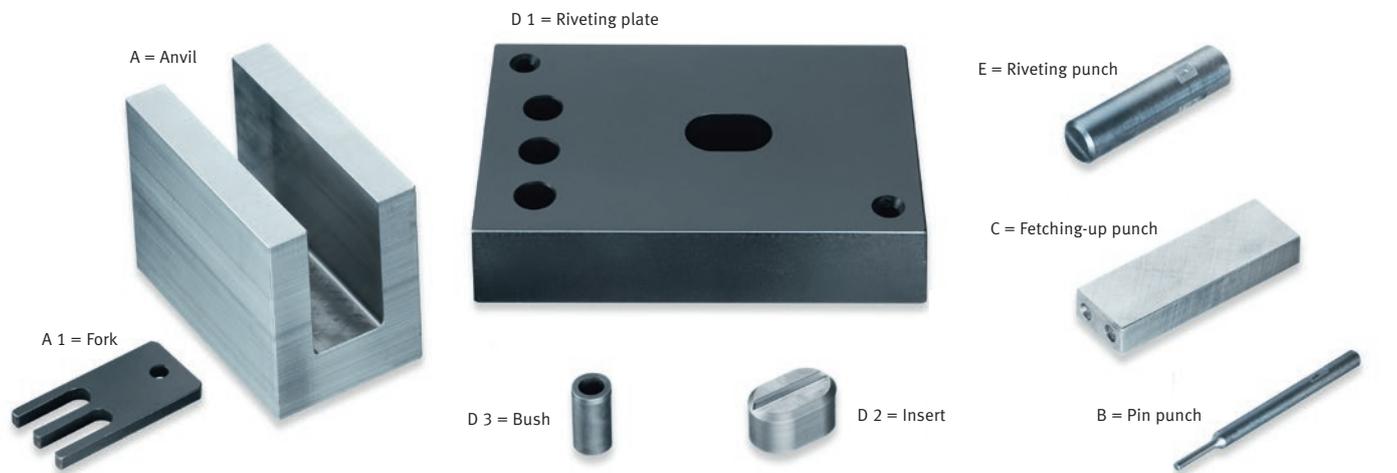

## **iwis**® Tool set for workshop use

The fork and anvil extraction kit is suitable for use with chains manufactured to ISO 606. Anvil (A) and fork (A 1) are suitable for breaking chains which have shouldered bearing pins.

To break chains with parallel bearing pins it is necessary to use plate (D 1) together with pin punch (B). The tool kits can also be used to assemble chains.

Fetching up punch (C) and bearing pin riveting punch (E) are used to complete this operation.

## Applications

### Breaking chains and chain assembly

#### BREAKING (PARALLEL BEARING PIN)

The outer link to be broken has to be placed over the holes in the riveting plate (D). The bearing pins are hammered flush with the outer plate and then driven through the chain with pin punch (B) whose diameter must be smaller than that of the bearing pin ①. To assist when breaking large pitch chains it is recommended that the rivet head is initially ground away.

#### BREAKING (SHOULDERED BEARING PIN)

The fork (A 1) is placed through the chain at the outer link which is to be removed. The fork is then supported by the anvil and the bearing pins are driven through the chain using punch (B) ②. Multiple strand chains can also be broken in this way, the fork should then be placed in the top strand of the chain.

#### ASSEMBLY

The procedure used is common to both shouldered and parallel bearing pin chains. The new riveting link connects the two inner links. This connecting link is supported by an insert in riveting plate (D) ③.

A new outer link plate is fitted using fetching-up punch (C) ④. With parallel bearing pin chain it is possible to over fit the outer link plate on the bearing pins. It is necessary to check that the joint remains free and easily moveable after fitting.

The newly fitted outer link then requires the bearing pin ends to be riveted. This is done with riveting punch (E) ⑤.

## **iwis**® Chain breaker

### How to use the iwis multi station chain breaker

#### CHAIN BREAKER

This multi-station rivet extractor can be clamped in a vice or screwed onto the workbench. Positioning it along the front edge of the bench will provide clearance so that the full range of chains can be cut. Supports to the left and right make chain handling easier when long chains are being inserted.

The rotating head holds five sets of ejector tools. Each set is marked with the pitch of the chain which they cut. The rotating head holds five sets of ejector tools marked with the chain size. The following iwis chains can thus be taken apart at the correct setting.

A distinction is made here between:

- Chains with shouldered pins
  - Chains with parallel pins
- (look at page 79)

**ARTICLE NO. 4500**

#### REPLACING THE PRESSURE PINS AND SUPPORT FORKS

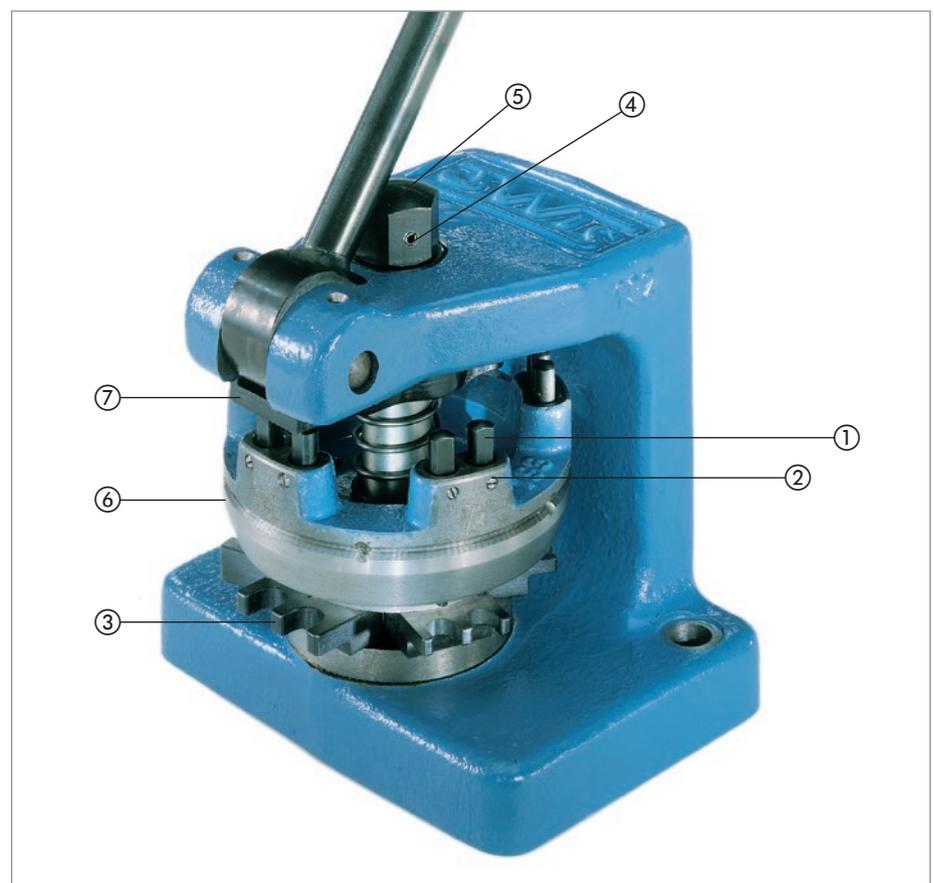

##### **Pressure pins ①:**

Loosen grub screws ② pull pins out upwards. Replace as a complete set.

##### **Support forks ③:**

Loosen top nut ④ after knocking out safety spring pin. Press out middle bolt ⑤ downwards and remove tool tray ⑥ forward. Take out the two spring pins which secure the support fork. Insert new fork.

Pay attention when reassembling, that the pressure plate ⑦ is correctly positioned with the latch pin at the back of the body casting. Tighten nut ④ back up and secure with pressure pin.

## **iwis**® Chain breaker

### How to use the iwis multi-station chain breaker

#### A) CHAINS WITH SHOULDERED PINS

Chain link with shouldered pin

For breaking chains with shouldered pins the chain is fitted into the appropriate fork according to pitch, and the complete outer link is pressed out when the lever is pulled. It is important that the chain is fully located in the fork.

ISO no.	Ref. no. iwis	Pitch	Adjustment
06 B - 2	D 67	3/8 x 7/32"	3/8"
06 B - 3	Tr 67	3/8 x 7/32"	3/8"
08 B - 1	L 85 SL	1/2 x 5/16"	1/2"
08 B - 2	D 85 SL	1/2 x 5/16"	1/2"
08 B - 3	Tr 85	1/2 x 5/16"	1/2"
10 B - 1	M 106 SL	5/8 x 3/8"	5/8"
10 B - 2	D 106 SL	5/8 x 3/8"	5/8"
10 B - 3	Tr 106	5/8 x 3/8"	5/8"
12 B - 1	M 127 SL	3/4 x 7/16"	3/4"
12 B - 2	D 127	3/4 x 7/16"	3/4"
12 B - 3	Tr 127	3/4 x 7/16"	3/4"

#### B) CHAINS WITH PARALLEL PINS

Chains with parallel bearing pins

For breaking chains with parallel pins it is necessary to grind off the rivet heads on one side of the chain. Afterwards the outer link is pressed out as above.

ISO no.	ANSI type	Ref. no. iwis	Pitch	Adjustment
06 B - 1	-	G 67	3/8 x 7/32"	3/8"
08 A - 1	ANSI 40	L 85 A	1/2 x 5/16"	1/2"
08 A - 2	ANSI 40-2	D 85 A	1/2 x 5/16"	1/2"
08 A - 3	ANSI 40-3	Tr 85 A	1/2 x 5/16"	1/2"
10 A - 1	ANSI 50	M 106 A	5/8 x 3/8"	5/8"
10 A - 2	ANSI 50-2	D 106 A	5/8 x 3/8"	5/8"
10 A - 3	ANSI 50-3	Tr 106 A	5/8 x 3/8"	5/8"
12 A - 1	ANSI 60	M 128 A SL	3/4 x 1/2"	3/4"
12 A - 2	ANSI 60-2	D 128 A	3/4 x 1/2"	3/4"
12 A - 3	ANSI 60-3	Tr 128 A	3/4 x 1/2"	3/4"

If a grinding device is not available the rivets can be knocked out with a punch after the outer sideplate has been pressed off. Here the bushes must be well supported to prevent them coming off the inner plates

when the pressure pins and support forks are being replaced. Although chains can be taken apart without pregrinding the riveted head the danger of damage to the bush bore does exist. This could reduce chain

life. The iwis multi-station chain breaker can also be used to cut conveyor chains with straight or bent attachments plates of corresponding size. It is not suitable for 3/8 x 5/32" chains.

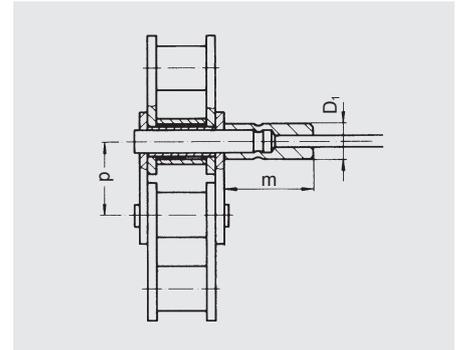

## **Jwis®** Repairing tool for tube and can conveyor chains Replacement of conveyor pins

### SPECIAL TOOL

The above represented iwis tool has been specially developed to repair tube and can conveyor chains.

It allows easy replacement of conveyor pins on already installed chains, types L 85 SL, M 106 SL, M 127 SL, M 128 ASL and M 128 A-SB (changeable).

Chain	Pitch	$D_1$	m
L 85 SL	12,7	8,0	22,0
M 106 SL	15,876	8,0	22,0
M 127 SL	19,05	8,0	22,0
M 128 ASL	19,05	10,0	22,0
M 128 A-SB	19,05	10,0	22,0

Repairing tool for tube chains and spare parts

## How to employ it

### Removal and fastening of pin adapter

#### REMOVE PIN ADAPTER

Insert the adapter into the jaws ① and break it by closing the tool. If necessary, repeat the action after 45° rotation. Once the adapter has been broken, remove the pin.

#### FIXING OF A NEW CONVEYOR PIN

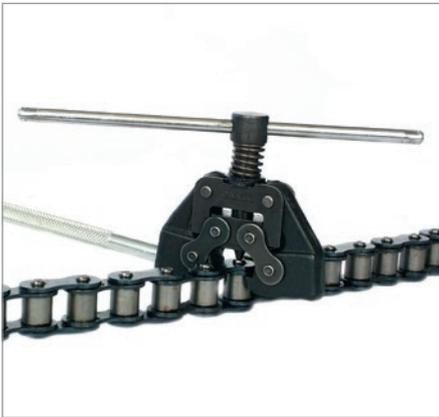

The new adapter is set onto the extended pin. Seize it with the gripping jaws ② and clamp it with the tool. Thus repaired, the chain is operational again.

## **iwis**® Chain pin extractor and **iwis**® Chains pullers

### UNIVERSAL CHAIN PIN EXTRACTOR H

#### ARTICLE NO. 4511

For use with any chain having shouldered bearing pins only.

#### Chain range and reference numbers 0.500" to 0.750" pitch:

- L 85 SL
- D 85 SL
- Tr 85
- M 106 SL
- D 106 SL
- Tr 106
- M 127 SL
- D 127
- Tr 127

The chain is clamped between the extractor jaws and the pins are then pressed out one by one by rotating the extractor handle.

### SIMPLE RIVET EXTRACTOR F

#### ARTICLE NO. 4516

For chains with parallel pins.

#### Chain ref:

- P 83 V
- S 84 V

The chain is placed in the tool and the pins are pressed one by one through both outer plates. (Note: This extractor should not be used on chain with shouldered pins).

### CHAIN PULLERS

#### ARTICLE NO. A) 4518 B) 4519

- a) No. 35 for 3/8 to 3/4" pitch chain
- b) No. 80 for 1" to 2" pitch chains

Maximum opening of the chain puller is 135 mm.

## Notes

# JWIS<sup>®</sup> Automatic tensioners

Automatic chain tensioners compensate the chain elongation in the machines and conveyor systems and that way further the run time of the applied chain. iwis chain tensioners are made from high quality materials. Depending on the application various types are available.

\* Plastic version

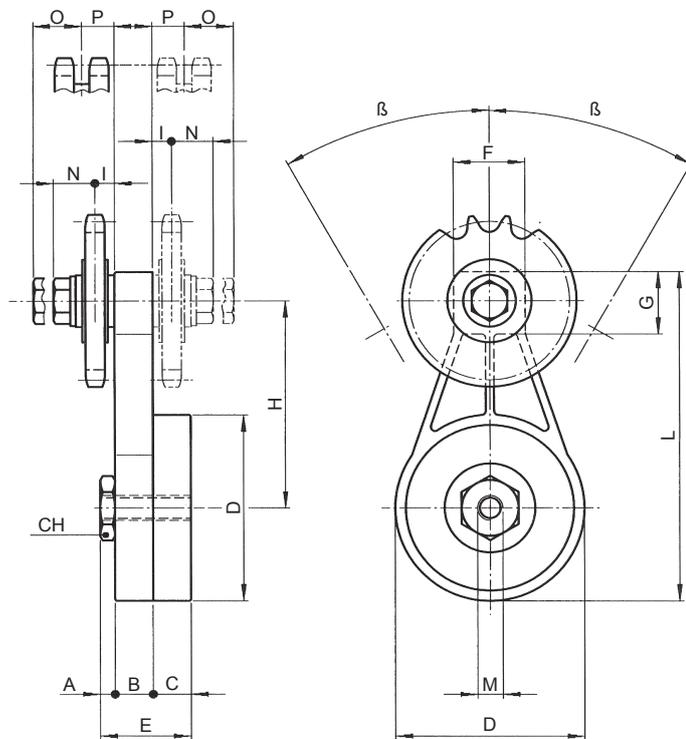

**TYPE TC**

- Linear force progression
- Operating angle > 45° in both directions of rotation
- Simple screw mounting, internally or externally
- Operational temperature to 100°C
- Applies to reverse direction drives
- Resistant against oil and solvents
- Better fastening due to 2 (TCR-1) resp. 3 (TCR-2) grooves

**EXAMPLE OF ORDER**

Tensioner for 1/2" pitch single chain TCP 1 1/2" S. For single chain available from stock. For double chain on request.

**S** = single chain **D** = double chain

### AUTOMATIC CHAIN TENSIONERS

The automatic tensioners take up the chain slackening and keep the tension constant, without any operator attending the adjustment. The TO-AT-ET tighteners are designed to last and are made of top quality materials. The maximum operating temperature is 65°C (100°C for the ET model only).

Available on request:

- Studs and spring in stainless steel AISI 304 for the Food industry
- Special head shapes
- Version TO-05 and TO-05 DP1 with basic body in plastic execution (DELFIN). Slight type with lower tensioning force – available on request.

# **iwis**® Chain guide

Regular maintenance and lubrication are preconditions for low wear and long service life of the chain drive. The maintenance and lubrication frequency, as well as the related relubrication, are determined by the operating conditions of the application. The iwis chain guide outlines the choice of possible chain lubrications and recommended relubricants. All initial lubricants are developed especially for iwis and their composition is tailored to be the best possible for the product chain. Please contact our Technical Service Team for more information regarding the maintenance and handling of chains. We will happily advise you!

## Lubricating the **iwis**® chains iwis chain lubricants

### OUR CHAIN LUBRICANTS - THE BEST POSSIBLE SOLUTION FOR EVERY APPLICATION

Sufficient and effective lubrication increases the length of life of the chains several times over. The selection of the correct lubricant and the appropriate method of lubrication guarantee good reduction of wear, sufficient protection from corrosion and optional damping characteristics. Countless trials on specially developed test equipment and close collaboration with well known lubricant manufacturers make iwis your competent partner for all questions relating to chain lubrication.

All iwis chains are provided with sufficient, reliable, high quality initial lubrication in accordance with precisely stipulated procedures, which are the subject of constant monitoring, and delivered ready for installation. All the initial lubricants are developed especially for iwis and their composition is tailored to be the best possible for the chain product.

### A SUMMARY OF OUR INITIAL LUBRICANTS

**IP2** the proven standard lubricant with a good lubricating effect and excellent corrosion protection for applications of all kinds from -10° to +80°C.

**IP3** long-lasting lubrication at higher speeds, loads and temperatures. As a consequence of its high viscosity, it is absolutely resistant to spinning off over the entire temperature range from -5° to +150°C.

**IPW** the handling-resistant high performance lubricating wax with very high wear protection permits significantly longer intervals between applications of lubricant. Problem-free use as a „barrier grease“ in all environments where dust and powder are present. Temperature range from -10° to +80°C.

**IP4** thermally stable high temperature lubricant with good wear- and corrosion-resistance. Low evaporation rate in the temperature range from 0° to +250°C. Forms no residue at temperatures above 250°C.

**IP9** the corrosion-protection for preservative use with a very low lubricant effect. Temperature range from 0° to +70°C.

**IP14** dry lubricant for slow-running chain drives and low to medium loads. Stove enamel with built-in lubricant for applications from -70° to +250°C.

**IP16** the lubricant for food use with good wear- and corrosion-resistance. Meets the requirements of USDA-H1 and LMBG - authorised for contact with food. Temperature range from -20° to +130°C.

**IPO** low temperature lubricant with optimum lubricating effect. Able to flow in the entire temperature range from -45° to +150°C.

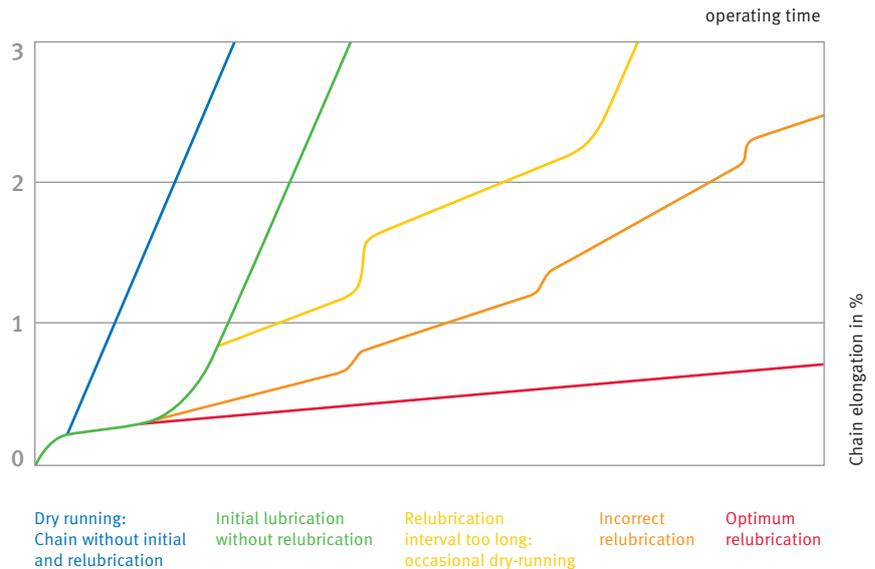

## Relubrication of the **iwis**® chains

### Relubricants

#### RELUBRICATION

The life of a chain is dependent to a decisive extent on correct and adequate topping up of the lubricant. As a consequence of the oscillating movements of the chain link, the initial lubricant is used up in the course of time depending on the operating conditions. If the lubricant is topped up regularly, the chain is mainly within the range of fluid and mixed friction. An absence of lubricant or badly selected re-lubricants cause dry friction, which leads to the formation of fretting corrosion and increased wear of the chain.

The selection of the lubricant and the correct lubrication technique is decisive for effective relubrication.

#### RECOMMENDED RELUBRICANTS FOR OUR INITIAL LUBRICANTS

- IP2** iwis VP6-Kombi superplus (spray)  
All standard commercial chain oils
- IP3** iwis VP6-Kombi superplus (spray)  
High performance chain oils from various manufacturers, e.g. STRUCTOVIS HD-series from Klüber Lubrication
- IPW** iwis VP6-Kombi superplus (spray)  
High performance chain oils from various manufacturers, e.g. STRUCTOVIS HD-series from Klüber Lubrication
- IP4** iwis VP6-Kombi superplus (spray)  
High temperature chain oils from various manufacturers, for temperatures above 250°C with proportions of solid lubricant

■ Designation initial lubricant  
 ■ Recommendation re-lubricant

- IP9** iwis VP6-Kombi superplus (spray)  
All conventional chain oils
- IP14** iwis VP6-Kombi superplus (spray)  
Chain oils containing a proportion of solid lubricant such as graphite, MOS2
- IP16** chain oils approved for food use, e.g. Klüberoil UH 1-series
- IPO** low temperature chain oils from various manufacturers

#### RELUBRICANTS

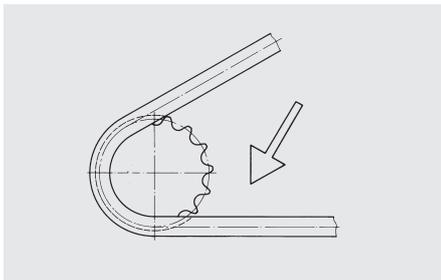

should possess the following characteristics – depending on the application:

- Adhesiveness
- Compatibility with initial lubricant
- Corrosion protection
- Load-bearing capacity of lubricant film
- Ability to creep
- Lubrication of emergency running
- High viscosity and simultaneous ability to flow
- High temperature stability
- Water-repellent
- Resistance to media etc.

## Lubricating the **iwis**® chains

### Lubrication techniques

#### MANUAL LUBRICATION

Using a paint brush, oil can or spray can for slow-running chain drives. The proven VP6-Kombi superplus (spray) is distinguished by the following characteristics:

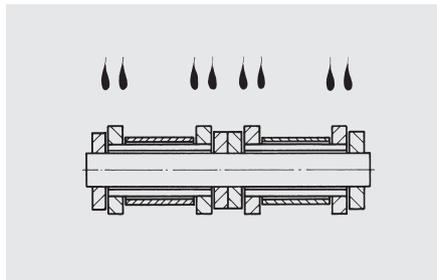

- Synthetic high performance chain lubricant
- Optimum lubricating effect and adhesion
- Excellent ability to creep
- For normal and high temperature use up to +250°C
- Excellent corrosion protection
- Also well suited to O-seal chains

#### RECOMMENDATIONS

The chain drive should be cleaned with a brush before the lubricant is topped up to enable the lubricant to enter. In addition the surface of the chain can be cleaned with cleaner's naphtha or petroleum. Full submersion and washing out is not recommended.

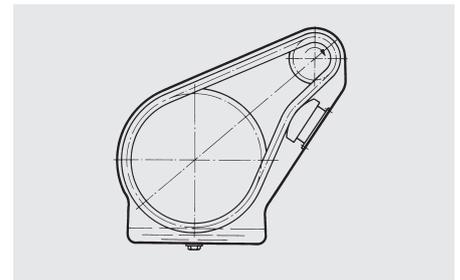

Connecting elements (for example, connecting links), when supplied separately, have only been immersion-protected against rust and must be greased upon installation. If the connecting links are supplied together with the chains, they will have been greased with the same lubricant as the chains.

#### DRIP LUBRICATION

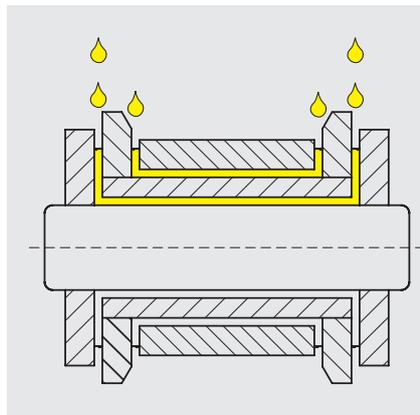

Using drip oilers, automatic lubricant feed or central lubrication units at medium chain speeds.

#### OIL BATH LUBRICATION

Using enclosed chain boxes and, if necessary, additional centrifugal disc for fast-running chain drives

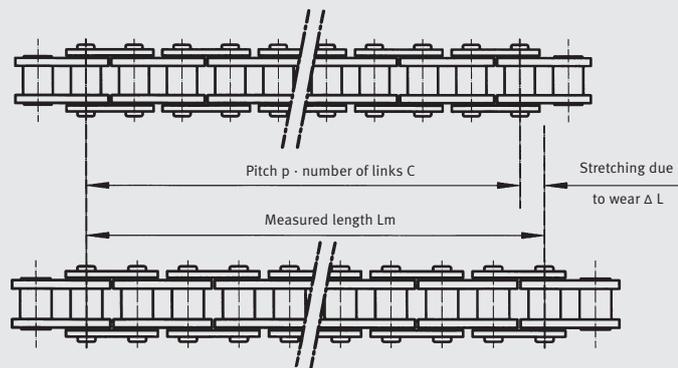

The lubricant product must be able to penetrate into the bearing area of the chain. To guarantee this the lubricant must be applied deliberately to the gap between the inner and outer plates.

## Efficient chain maintenance

Regular maintenance and lubrication are preconditions for low wear and long service life of the chain drive. Maintenance and lubrication frequency, as well as the related relubrication, is determined by operating conditions (tensile forces, temperature, contamination, aggressive media).

### MEASUREMENT OF STRETCHING DUE TO WEAR

$$\Delta L = \frac{L_m - (p \cdot X)}{p \cdot X} \cdot 100 [\%]$$

### MAINTENANCE

During **regular visual inspections** special attention should be paid to **stretching due to wear, tension, lubrication condition, and evidence of wear due to tracking errors.**

#### Checking the maximum permissible stretching due to wear:

The length of a chain is defined by the pitch  $p$  and the number of links  $X$ . In the course of time stretching due to wear occurs, and usually this can be measured without removing the chain. The difference from precise measurement with a specified measurement load is slight if measurements are conducted over the highest possible number of chain links, approximately 20 to 40.

The **chain should be replaced** at:

- max. 3 % for simple drives
- max. 2 % for high-performance drives
- max. 1 % for special applications (synchronous operation, positioning)

Controlled **retensioning** of the chains has a very positive effect on the chain life. Extreme retensioning should be avoided just as much as excessive slack. A guideline figure would be a tension load of approx. 5 % of the actual chain pulling force. In the case of chains running in parallel both strands must be tensioned equally, at best by a common shaft for both sprockets. If no automatic chain tensioning device is available, the chain must be adjusted by hand by altering the distance between the sprocket shafts. A further possibility with long drives is to shorten the chain by removing individual links, provided that wear is relatively light. Various tools are available for dismantling and reassembling the chain. These tools are available for parallel pin and shouldered pin chains.

Before **relubrication** the chains and sprockets should be **cleaned** to remove obstinate contamination and to permit the lubricant to penetrate via the back of the plates. The surface of the chain can also be cleaned using an appropriate solvent.

Complete immersion and washing is not recommended as the cleaning agent does not evaporate completely from within the chain and thus the penetration of the fresh lubricant is obstructed.

During **visual inspection** attention should be paid to evidence of chain linkplate marking and wear due to tracking errors. These are caused by misaligned sprockets or guides or by chains which are not in parallel.

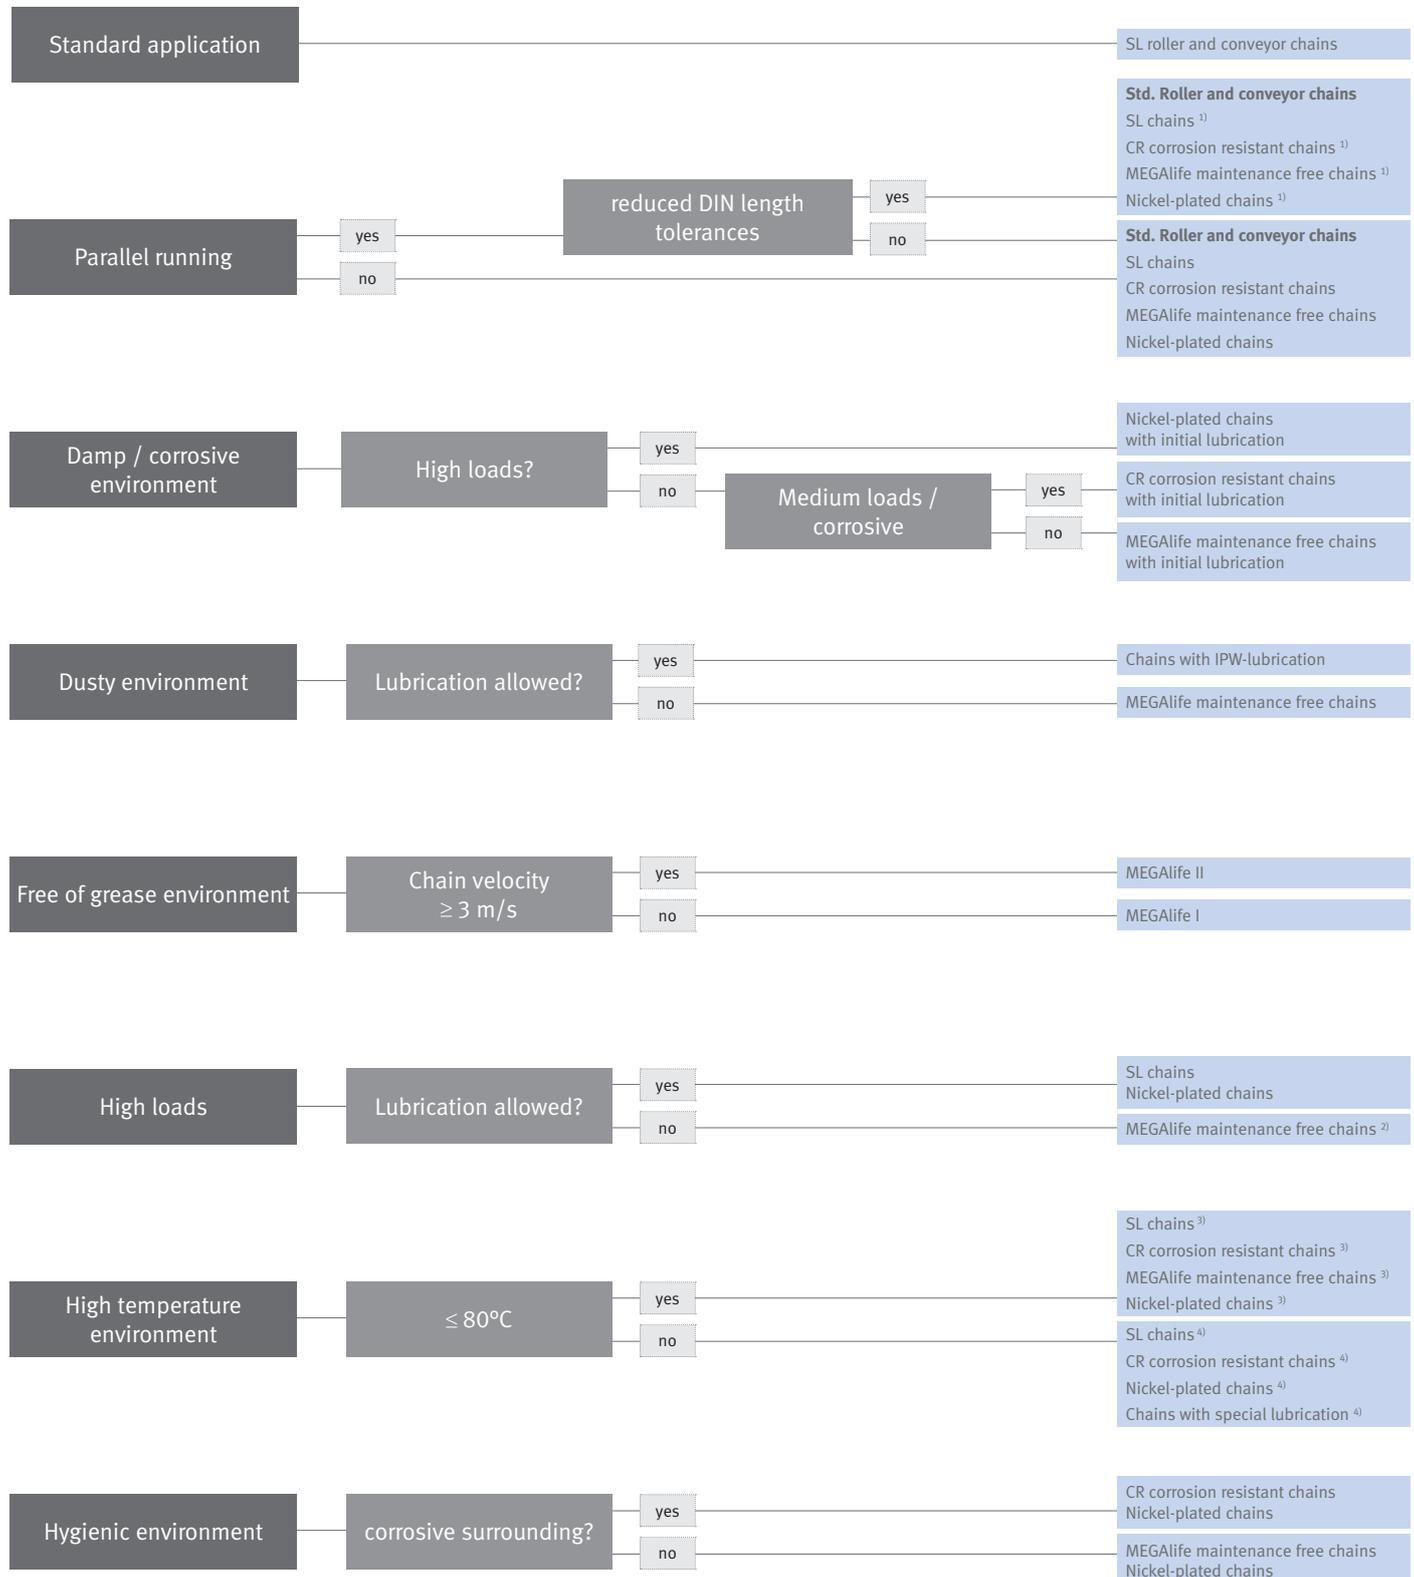

Guide for alignment deviations per 100 mm axle separation:

- 0.1 mm with fast-running drives and close axle spacing;
- 0.2 mm with slow-running drives.

The sprockets should be constantly inspected and if necessary replaced. We do not recommend that new chains are used with worn sprockets.

## iwis® chain guidelines

### Which application demands which chain type?

<sup>1)</sup> with reduced tolerances

<sup>2)</sup> application limited <sup>3)</sup> with standard lubrication or IPW <sup>4)</sup> IP up to 150°C and IP4 up to 240°C

## **iwis**® chain guidelines

### Important information

#### IMPORTANT DETAIL

The following guidelines support you in choosing the right chain. However, please note that each application is individual. The result should in no case serve as a basis for your order. Therefore please refer to our professional employees who are happy to submit an individual order to you. We do not assume any guarantee or liability.

#### CHAIN ENGINEERING PROGRAM

iwis provides you with a special PC-Software serving as support for the specification of the individual chain drive design or rather the preselection of the appropriate chain. Please ask our Customer Service Team!

#### FOR MORE INFORMATION TO

- SL chains  
→ Page **14** and **20**
- Nickel-plated chains  
→ Page **14**
- MEGAlife maintenance free chains  
→ Page **32**
- CR corrosion resistant chains  
→ Page **42**

#### CHAIN FABRICATION LENGTHS

- 5 m
- 10 m
- 10 Fuß

Adjusted lengths can either be supplied open or closed. Special lengths (e.g. on coils) are available on request and depending on chain type.

#### OUR CONVEYOR CHAINS

If a parallel run is necessary, iwis can manufacture and supply chain strands with precisely harmonised lengths, bundled together and marked accordingly. This is in particular important for chains with opposite cam or angle side plates.

#### PRICE SUPPLEMENTS:

Price supplements will be calculated for:

- adjusted lengths
- special lubrications
- reduced tolerances
- short lengths
- special coatings
- nickel-plated chains and single parts  
Prices on enquiry.

#### CUSTOM-MADE CHAINS

Special chains made according to customer drawings are possible. Prices on enquiry. Minimum order quantity is 50 m.

#### MINIMUM ORDER QUANTITIES FOR CONNECTORS AND CRANKED LINKS

Chain dimensions	Inner link / Outer link / Connecting link	Cottered Link
6 mm – 3/4"	20 ea	10 ea
1" – 1 1/4"	10 ea	10 ea
Duplex – Triplex	5 ea	5 ea
Parts over 1 1/4"	1 ea	1 ea

## iwis® Designing chain drives

### CHAIN DIMENSIONING INQUIRY FORM

When choosing roller chain for drive and conveyor applications there are a number of specific factors that need to be taken into consideration. To assist our customers, we have compiled the „iwis Chain Engineering Guide“ which describes and illustrates some basic principles of chain engineering. The engineering manual is available online or in printed form.

You can also submit a calculation inquiry form to iwis’s team of experienced engineers and developers for help with your particular application.

We would be happy to help you design your chain drive. Simply fill in the necessary details on our downloadable form.

[www.iwis.com/chain-design](http://www.iwis.com/chain-design)

Then once you have completed the form, just click on the button at the bottom to send it via your e-mail client to [chaindrive@iwis.com](mailto:chaindrive@iwis.com).

**Note:**

You will need Adobe Reader, version 8.0 or later, to view the form correctly. You can download the latest version of Adobe Reader free of charge from <http://get.adobe.com/uk/reader/>.
